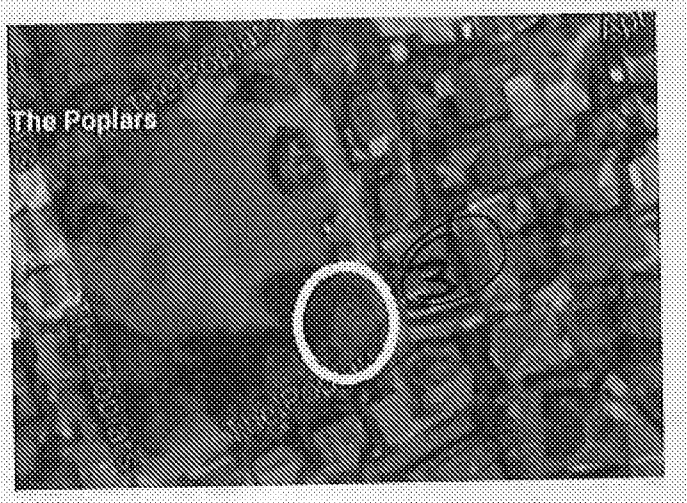
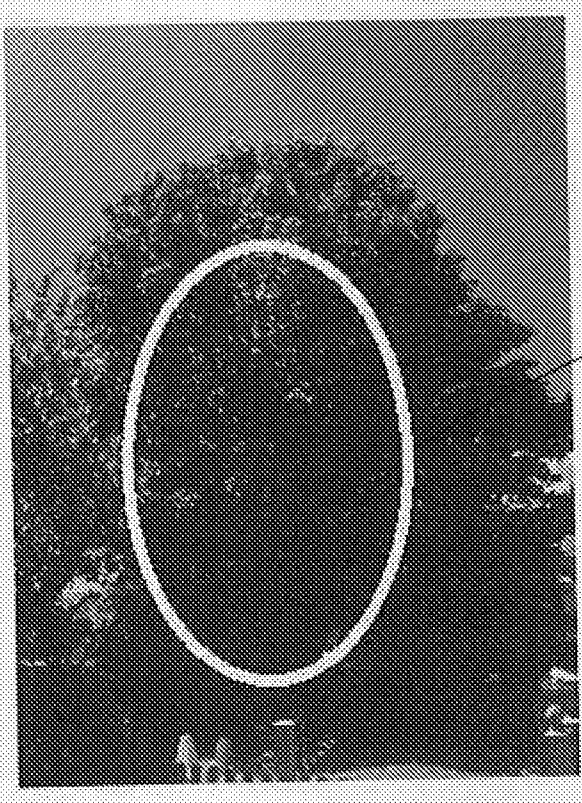
3 The poplars

The tree in question is a mature Sycamore in good health. The tree is a fantastic specimen and provides a good amity value to the surrounding area.
We are keen to maintain the tree at a sensible size long term, so the proposed work would be a 2 metre reduction in Hight and a 2 meter lateral reduction this would keep all pruning wounds to bellow 100mm in diameter which would be in accordance of with British standards 3998.2010.





New canopy size.
