Description and Sources

Description

St. George's Church, Eastergate, has Norman walling but with Roman tile and brick built into the S. wall of the nave.{1}{2}

St. George's Church. In the chancel the small window and the wall are early Norman work (? Pre-conquest). The lower part of the south wall is largely composed of Roman bricks in herring-bone work. {3}

For a possible villa site nearby see 1406.

St George. Nave, chancel and frilly C19 bell-turret, but too heavily restored to be attractive. The wailing probably entirely Norman - see the herringbone masonry on the S side of the chancel, and a narrow primitive window on the N side. Later windows, more or less renewed: C14 in the nave, three-light C15 at the E end, three-light C15 at the W end - built with a bequest of 1534, and already with simple arched and uncusped heads. {4}

FINDSPOT (Ceramic, Bronze Age - 2350 BC to 701 BC)

Evidence	FIND
Main Building Material	CERAMIC

Description and Sources

Description

A small Late Bronze Age bucket shaped urn was found at "Greenings," Eastergate Lane, in 1954. The urn was retained by the finder. The find spot is said to be 25 foot from the front hedge and 170 yards from the corner of Fontwell Avenue.
In 1972, the present owners of the property could offer no further information about the find. According to the curator of Bognor Regis Museum, the urn was found at a depth of 2ft whilst digging a pit. The present whereabouts of the urn is unknown. {1}

SMR Number	Site Name	Record Type
MWS2364	Possible site of a Roman Building, Eastergate	Monument

Fragments of Roman pottery, some animal bone and oyster shells were identified in a field to the south of St. Georges Church, Eastergate. Roman tile was also identified in another field and in the Nave of the St. Georges Church, Eastergate. A 1925 aerial photograph shows a crop mark where the finds were made possibly indicating the site of a Roman building.

Monument Types and Dates

OCCUPATION SITE (Occupation debris, (between) Roman - 43 AD to 409 AD)

Evidence	CROPMARK
Evidence	DOCUMENTARY EVIDENCE

Description and Sources

Description

Many fragments of Romano-British pottery (coarse ware, sherds of New Forest Ware, possible fragments of tegula), some animal bone and oyster shells were found in 1952, on the surface of a ploughed field to the South of St. Georges Church, Eastergate. In 1962, the site was within a field under grass and nothing further was found. However, Roman tile was found in the ploughed field immediately to the North. Further finds of Roman tile were made in 1971, together with some Medieval pottery (see 1407). A cropmark on the RAF Aerial Photograph 60802 (dated 1925) shows a crop/soil mark where the finds were made, possibly indicating a villa site. Although the farmer was unaware of the site and had made no further finds, he stated that the crops in the are showed poor growth, suggesting buried foundations. In 1986, it was noted that St Georges Church, Eastergate (1266), to the North of the site, has a large quantity of Roman tile built into the South wall of the nave (said to be Norman), including apparently complete tegulae {1}

Crop mark of a possible Roman villa and tile built into the church.{2}

Romano-British Pottery found AD. 1952. Area centred SU 9464 0463. Many fragments of R.B. coarse ware, sherds of New Forest ware, possible fragments of tegula, some animal bone and oyster shells were found on the surface of a ploughed field to the south of St. George's Church, Eastergate. The above siting falls within a field at present under grass and nothing further was found, but Ro. tile is to be found in the ploughed field immediately to the N. Further finds of Roman tile were made in the area at the time of investigation together with some Md glazed pottery. The RAF AP dated 1925 shows a crop/soil mark where the finds were made, indicating a possible villa site. Although the farmer was unaware of the site, and had made no further finds, he stated that the crops in the area showed poor growth, suggestive of buried foundations. {3}

Monument Types and Dates

DITCH (Medieval - 1066 AD to 1539 AD)

Description and Sources

Description

Two evaluation trenches revealed the presence of two adjacent north-south ditches, the more substantial of which contained pottery of 11th-13th century date. These may represent earlier churchyard boundaries c. 2-3m east of the present churchyard wall.
Two further parallel linear features, aligned east-west, probably confirm the position of a post-medieval field boundary/drain and a more recent garden boundary.
The presence of burnt and worked flint indicate a probable prehistoric activity in the area. A single fragment of tegula was recovered form the subsoil. (1)

Monument Types and Dates

DITCH (Early Iron Age to Roman - 800 BC to 409 AD)

GULLY (Early Iron Age to Roman - 800 BC to 409 AD)

LINEAR FEATURE (Early Iron Age to Roman - 800 BC to 409 AD)

OCCUPATION SITE (Early Iron Age to Roman - 800 BC to 409 AD)

Description and Sources

Description

Three linear features provisionally dated to the Early Iron Age-Late Iron Age period were cut by features from the Late Iron Age-Romano-British period. There were no intercutting features provisionally dated to the Early Iron Age-Late Iron Age period. There were a great many intercutting features, predominately linear, provisionally dated to the Late Iron Age-Romano-British period. A brief consideration of the results of the excavation has identified at least four phases of activity during this period related to agricultural and more permanent settlement activity.{1}

Description and Sources

Description

Eleven trenches were excavated to a cumulative length of 145 metres. Archaeological features were discovered across the site, and particularly in trenches 1 and 2.
An area of 50 metres squared was opened around trenches 1 and 2. The excavation around trench 2 revealed a series of features dating to the medieval period (11th - 14th Centuries). A curvilinear gully/ditch was traced and one terminal end was seen. To the south, a layer of possible occupation debris was recorded sealing another possible ditch/gully and a large pit. One pit contained worked flint and a single small sherd of Bronze Age pottery, whilst the remaining pits contained medieval pottery. The area opened around trench 1 revealed more features all dated to the Saxo-Norman and later medieval periods.

ARUN DISTRICT COUNCIL EG/42/18/OUT

SMR Number MWS9493 **Site Name** Land to the Rear of 23-27 Ivy Lane, Westergate - Post Excavation Assessment

One feature contained small sherds of residual prehistoric pottery.
Trench 11, 7 metres in length, was cut to trace the alignment of a large ditch uncovered in trench 7. Finds recovered from Trench 7 date to the 12th or early 13th Century. A piece of Roman pottery was also retrieved. Trench 11 was successful in locating the continuation of this ditch.
Subsequently, an additional area (c. 162 metres squared) was opened beneath the old Caretaker's Lodge, linking the areas around trenches 1 and 2. This area contained further features dating to the medieval period. Five linear features, four pits and five postholes were excavated. Refuse pits and an occupation layer provides further evidence that this part of the site may once have been occupied.
Although the samples taken have confirmed the presence of environmental remains, botanical remains are limited and there is strong evidence for modern disturbance within the samples. These samples therefore hold no potential for further analysis. {1}

An archaeological evaluation was undertaken at the Blessed St. Phillip Howard Catholic High School, Elm Grove South, Barn. Six trial trenches were excavated however no archaeological features or finds were identified.

Monument Types and Dates

Negative Evidence (Unknown date)

Evidence Excavation/Evaluation

Description and Sources

Description

An archaeological evaluation was undertaken at the Blessed St Phillip Howards Catholic High School. The evaluation firmly established the sequence of deposits at the site while at the same time providing a sufficient sampling of the area of the proposed development. Despite six trenches being excavated no archaeological features and/or deposits were identified at this site and no finds were made. {1}

(Former Type) WORKHOUSE (Built, (pre) Post Medieval - 1847 AD)

Evidence Cartographic Evidence

Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

Listed as a 'Workhouse Plot' and 'Old Workhouse and Garden' with co-occupiers George Mill and James Farenden (Landowner Parish Officers of Eastergate) on the Eastergate Tithe Map Apportionment (App. number 122 and 170)- dated 17th December 1847. The workhouse is marked at NGR 494642 105977 (on the east side of the A29 Fontwell Avenue). The workhouse has gone by the 1st Edition Ordnance Survey Map (dated approximately 1869 - 1875) and by the 2nd Edition Ordnance Survey Map (dated approximately 1895-1898) there is ' Old Gravel Pit' on the site of the workhouse and its garden. It would appear that all former evidence is likely to have been removed. {1} {2} {3}

Site of Tile Barn, Eastergate, has been identified as a Historic Outfarm dating to the 19th century - the Outfarm has been totally demolished/lost.

Monument Types and Dates

OUTFARM (Built, (between) Post Medieval - 1800 AD to 1899 AD)

Evidence	Cartographic Evidence
Evidence	DEMOLISHED BUILDING
Evidence	DOCUMENTARY EVIDENCE
Evidence	Survey

Description and Sources

Description

Site of Tile Barn, Eastergate, has been identified as a Historic Outfarm through the 'Historic Farmsteads and Landscape Character in West Sussex' Project. The project aimed to represent all farmsteads shown on the Ordnance Survey 2nd Edition 25" mapping of 1895.
Tile Barn was a 19th century U-Plan regular courtyard outfarm or field barn with the presence of a second yard with one main yard evident. It was in an isolated location but the outfarm has been totally demolished/lost. {1}

Description and Sources

Description

An archaeological evaluation was carried out on Land at Westergate, Aldingbourne, in advance of a proposed redevelopment of the site. The site is irregular in shape and measures around 11ha. It is bound by residential units to the south, Northfields Lane to the west, open fields to the north and Fontwell Avenue to the east. The current land use over most of the site consists of pasture fields and paddocks which are separated into land parcels by a mix of post and wire fencing and electric fences. A light industrial unit/barn lies in the centre of the site and is accessed by a farm track off of Fontwell Avenue at the eastern end of the site. A disused plant nursery, including a large greenhouse, occupies the southwest corner of the site and is accessed via a track off Nyton Road. The geology of the site and the surrounding area is London Clay.
The evaluation consisted of the excavation of 72 trial trenches. 25 of these trenches contained archaeological features. Three periods of archaeological activity were identified:
Period 1: Early Neolithic (around 3650-3300BC): All of the Neolithic activity was identified at the northeast of the site and was represented by two possible pits. One was a sub-circular feature with clear sides and undulating base. It consisted of a single fill containing a small group of possible Early Neolithic pottery. Burnt food residue adhered to one of the sherds was radiocarbon dated and confirmed a C14 date of 3777-3652CalBC (SUERC-46777:4937±30BP). The other pit was a sub-circular small pit of probable Early Neolithic date. The feature contained two fills containing four large probable Early Neolithic pottery bodysherds from a plain bowl, worked flints and fire-cracked flints.
A possible tree bole was also identified that contained probable Early Neolithic bodysherds (from a plain bowl) and worked flints.
Period 2: Late Bronze Age (around 1150-800BC): Morphologically similar ditches, on the same west-northwest to eastsoutheast alignment were found in six of the Trenches. Dating evidence from this group of ditches was sparse; single sherds of ‘prehistoric’ date were recovered in three of the Trenches. Similarly aligned (west-northwest to east-southeast) ditches were found in two of the Trenches which were also morphologically similar to the first ditch group. However, no dating evidence was recovered was this second ditch group. A third ditch group consisting of two ditches on broadly the same west-northwest to east-southeast were morphologically similar to the first two ditch groups. Dating evidence was better for these ditches, with 13 sherds of Late Bronze Age pottery recovered from one of the ditches, and late prehistoric (with residual Neolithic sherds) found in another. The final two ditch groups were all on a north-northeast to south-southwest alignment and found in four of the Trenches. Again these were morphological similar to the other groups. Limited dating evidence was recovered from the ditch in one of the trenches, two sherds of later Bronze Age date.
Taken together, ditch groups 1 to 5 appear to form a coherent, but intermittently surviving, field system, broadly aligned west-northwest to eastsoutheast. It is probable that where undetected, much of the system has been removed by later ploughing and it is notable that the best survival is broadly focussed on the two areas where the ‘relict’ subsoil also remains. Although sparse, the dating evidence would suggest that the field system was infilling sometime in the Late Bronze Age.
Period 3: Post-medieval (Late 18th Century): Morphologically similar ditches on a north-northeast to south-southwest alignment were found in four of the trenches. No dating evidence was recovered from them but they appear to be a good fit with plots recorded on the 1778-1783 Yeakell and Gardner map, suggesting that these boundaries were in use until at least the 18th century. The archaeological, combined with the cartographic evidence, suggests that the site remained in use as agricultural land throughout the post-medieval period, initially being divided up into several, relatively small, holdings until the 19th century when the holdings were ‘rationalised’ into larger plots.
Ten environmental samples were taken during the evaluation. The majority of the samples came from ditches which have been interpreted as possible prehistoric field ditches. Sampling has confirmed the presence of a limited amount of environmental remains including bones, shells, charcoal and charred macroplant remains. It has also produced evidence for

ARUN DISTRICT COUNCIL EG/42/18/OUT

the presence of roots and uncharred weed seeds.
The assemblage of charred macrobotanical remains is very small and is limited to two grains of wheat, a single grass seed and a single small hazel nutshell fragment.
The wood charcoal remains recovered from the environmental samples were in general poorly-preserved, and the assemblages small. The range of taxa identified suggests that wood for use as fuel was procured primarily from oak-dominated deciduous woodland, with woodland margin environments also being exploited as evidenced by the presence of Leguminosae wood. However, as the samples originate from ditch and pit features the charcoal assemblage is likely to be composed of amalgams of wood remains from numerous burning events, and as such cannot contribute to a more detailed discussion of fuel wood procurement and use. {1}
