Dear Gemma

I have matched your sample to our product code:- NHL3.5 / New Castleton. SM17 and this is an excellent match. It matches in strength, colour and texture:

I attach a CE technical file/specification on the proposed mortar, that matches closely the physical and technical performance of the existing sample.

I will dispatch a 10kg tub of this mortar, for use on site trials. Note it takes some weeks to dry back to the correct colour, So Inside the tub you will find a small container that contains two hardened cured physical samples of the mortar, one to be retained by you and one for the planners. These are the final mortars colour and attributes.

Regards

Colin Yates (master stonemason)
