

Conservation area planning specifications

As recommended by the Arundel tree warden, the dead yew tree is to be dismantled and removed, the other items that we would like to address in this area are as follows:

- Removal of all ivy grown up and around the large Cedar tree on site.
- Removal of all compost waste that has built up around the trees.
- Installation of compost bays to stop any future damage to either trees or the retaining wall.

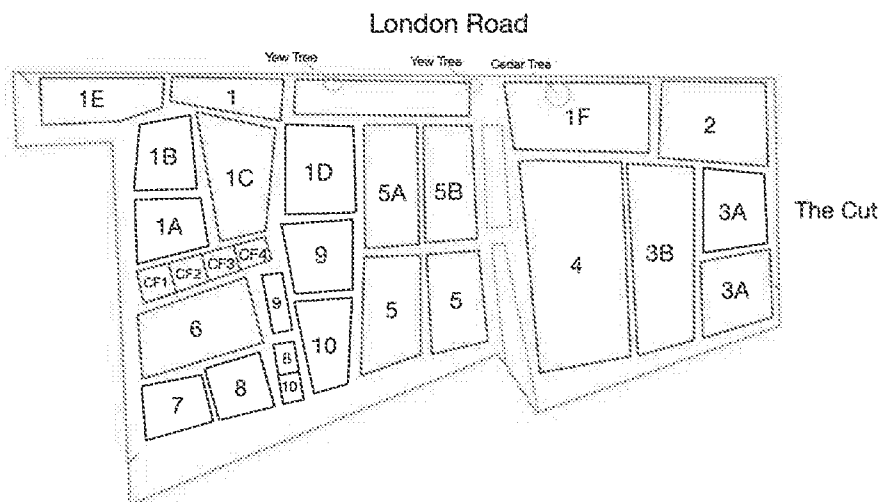

As we are required to plant a new tree in place of the Yew tree, we would like to plant a cherry tree. A cherry tree is easily maintained and serves a purpose to the allotment holders.

We do not want to remove the stump of the Yew tree as it may cause damage to the retaining wall, we would use ECO plugs to stop any unwanted regeneration.

As we want to remove the build up of compost, that is causing damage to the remaining trees and the retaining wall, we would have to remove the small shrubs that have grown up from the compost pile over the years.

ALLOTMENTS PLAN

02/07/2019

the compost pile stretches from the dead Yew tree on the left to the Cedar tree on the right, it is piled up against the wall and is imposing on allotments 1D, 5A, 5B and 1F.

Please see plan provided for location of photographs.
