Site Assessment

4 Barnfield Cottages is located in an established residential area and away from any ecologically sensitive areas. There is no evidence of any habitats of ecological value on site.

Proposals

The proposed rear extension is to be built on an existing hard landscaped area. Therefore the specific affected area of the site is of low ecological merit.

The existing soft landscaping on site will be retained. The proposals will therefore have little impact on the ecological value of the site.

The existing two storey gable ends to the house are retained and offer potential locations for bird nesting boxes.

Conclusion

The proposed extension will not adversely affect the local biodiversity and has the potential for some enhancement.
