The Mews House

Dear Jon,

Further to our recent site meeting and the clearing of the planning conditions we would offer that could be put forward.

Render – to be a lime cement sand mix placed on original substrate. Render to be hand applied in 2 coats approx 20mm thick finished with wooden float/sponge in a 5:1:1 mix (5 parts sand, 1 x cement, 1 x lime) to be decorated in a white weathershield or similar masonry paint.

Brickwork – facing brick to be a hand finished imperial sized weathered Gault facing brick by the Imperial Brick Company Ltd to be laid in a Flemish bond to match existing. Mortar to be a light sane, lime with added light small aggregates cement mix in a ratio of 5:1:1 with joints cut flush and lightly recessed brushed to expose aggregates.

Ballustrading – to be a structural glass system minimum 1100mm tall above a small brick parapet (facing brick elsewhere) as per details attached. Glass to be clear with satin finish, lower channel bolted to walling as per detail attached and architect section.

Yours sincerely

 K M Gearing
Director
