

Planning Application for an additional sign on the Causeway to complement the existing castle Sign.

As Arundel Town builds back from covid, there is a need for an additional sign on the A27 causeway roundabout to announce events that are happening in town like the farmers market.

The idea is to replicate an existing sign used by the castle. When not in use the sign board is removed and the remaining structure is unobtrusive and melts into the backdrop.

The castle sign is constructed of 10cm x 10cm planed soft wood.

The 2 main uprights rise 3.6m above the ground and are 1.83cm apart (outside edge to outside edge). Each are bolted to a concrete spur and set in postcrete.

The 2 uprights are supported by angled timbers that rise from the ground 1.5m behind the uprights and join the uprights at a height of 1.6m (almost 45degrees).

There are 2 main horizontal timbers (top and bottom) measuring 10cm x 5cm and 2.3m in length.

The lower one is 1.26m from the top of the upright. The higher one is just 15cm from the top of the upright.

These are used to support the signs when in use.

Planning Application for an additional sign on the Causeway to complement the existing castle Sign.

The lower timber has a facing plate that is proud of the timber to stop the notice from slipping forward.
The top timber has a bolt at each end that secures the notice board in place.

There is an additional horizontal timber (5cm x2.5cm) that enables the sign to fit snugly in place.

The sign itself is Plywood measuring 8ft by 4ft
