

PLANNING APPLICATION NUMBER 2011

ARUNDEL AB/148/17/PL

Mt. Richard Faggetter
15 Dalloway Road,
Arundel BN 18 9HJ

MRS A GARDNER

Dear Sir,

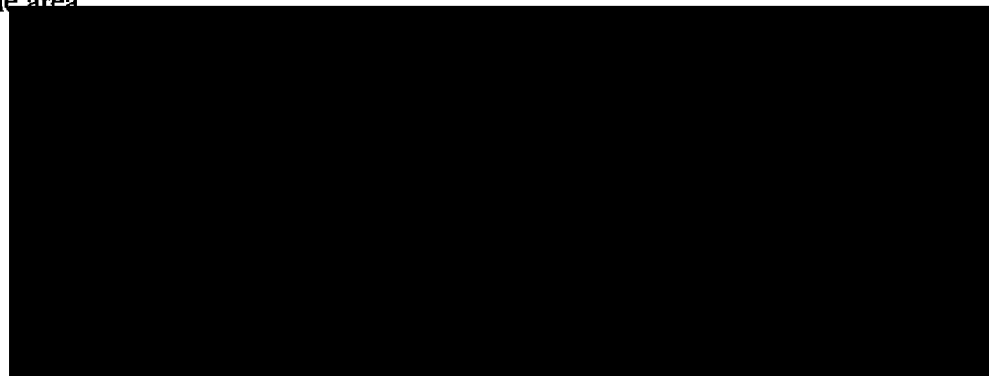

I am writing to you in respect of the planning application that is proposed on the woodland, opposite Dalloway Road and Birch Close.

As a resident with more than 33 years living at the address above, I must say how much this proposed development concerns my wife, and myself, in as much as the ecological destruction of the habitat that contains nesting for various species of birds, ie Honey Bustards that have nested there, also owls which roost in an oak tree in my garden, roost there also, and Nightjars as well a few years ago this can be checked out with the Wetlands Wildfowl in Arundel as an employee 20 years ago would bring people to this woodland for the sole purpose of hearing them, various bat surveys have taken place, and in the summer evenings we watch them fly across our garden and into the wood, Roe Deer are in there also and come from the woods behind to the west.

The footpath has over the last 20 years has been altered, this was a straight line originally from the bramble bushes to the right of the stile, that is looking towards the woods from Dalloway Road, and going to the stile in Priory Lane, this has been pushed towards the east towards the field over the years as trees have lost branches etc and the original access blocked.

Due to the lowness of the ground for the said proposed Buildings, drainage for foul water would necessitate the houses to be very high up to facilitate a connection with the main sewer at a 1-40 fall which runs down the centre of Dalloway Road, also the surface water is inadequate at present to take any more dwellings as it floods out of the drain covers all the way down Dalloway road, and culminates with the last drain that is outside my double gates from which it then goes across my property down to Ford Road, this is always flooding down across my property and any more houses will add to the problem.

I can only conclude that this is not a good logical project, and will harm the environment, and all who use the area.
