

A high-contrast, black and white photograph of a mechanical device, likely a typewriter or printer. The image is dominated by a large, circular component on the left side, which appears to be a wheel or a drum. To its right, there is a vertical assembly with various mechanical parts, including what looks like a carriage or a frame. The overall image is very dark and grainy, with a high level of contrast that makes it difficult to discern fine details. The text "Grundel. The Dairy." is visible in the upper left corner, oriented vertically.

113. Mill Road, soon after its opening by its donor, Henry 15th Duke of Norfolk, in 1892. These Lime saplings have grown to form a tunnel of green shade leading to Swanbourne Lake.

114 (above), 115 & 116 (overleaf). Arundel Castle Dairy, built on the site of the old water mill beside Swanbourne Lake. Note how a fountain was provided inside the dairy to keep the atmosphere clean and cool. The style of architecture of the dairy has been repeated in the design of the modern buildings at the adjacent Wild Fowl Reserve. The picture was taken about 1910.
