The historic town of Arundel

Monument Types and Dates

MOTTE AND BAILEY (Medieval - 1066 AD to 1100 AD)
Evidence STRUCTURE
TOWN (Medieval - 1066 AD to 1539 AD)
Evidence STRUCTURE
DOMINICAN FRIARY (Medieval - 1221 AD to 1532 AD)
Evidence DEMOLISHED BUILDING
TOWN WALL (Medieval to Post Medieval - 1295 AD to 1659 AD)
Evidence STRUCTURE
CURTAIN WALL (Post Medieval - 1833 AD)
Evidence STRUCTURE
ROMAN CATHOLIC CATHEDRAL (Post Medieval - 1876 AD)
Evidence EXTANT BUILDING

Description and Sources

Description

Arundel is situated at a crossing point of the River Arun - the 'Tarente' of a late Saxon charter - some six kilometres inland from its mouth, where natural promontories to the north and south.
Domesday Book records that a castrum, church and mill had existed at Arundel in 1066. The motte-and-bailey is generally considered to have been a form of defence introduced at, or soon after, the Norman Conquest. It may be that a small area, later occupied by the castle, was protected by the erection of defences across part of the natural promontory in the late Saxon period. A possible pre-Conquest grave slab, apparently reused in the footings of the Norman Castle, may indicate the former existence of a late Saxon church nearby. M. Beresford has suggested that there may have been a civil settlement alongside the castrum, church and mill in the immediate pre-Conquest period.
It is probable that the castle, with its motte and twin baileys, was erected and the market place developed immediately after the Norman Conquest. Arundel was represented as a borough or vill by its own jury in 1248 and from 1294 it was taxed as a borough. The town walls, linking the castle, St. Mary's Gate, and Water Gate, appear to have been erected in 1295 though a Bogerwerth gate, thought to have been situated in the outer defences, was mentioned in 1275. It may well be that the walls built in 1294 represent a reduction in the area covered by the defenced town though this is by no means certain since earthern defences may have pre-dated the construction of the walls.
A Dominican Friary was founded in 1221 on the north side of, what is now, Maltravers Street and a Leper Hospital, first mentioned in 1272, probably stood to the north of the town. The Priory of St. Nicolas, which may have been of late Saxon origin, was demolished and replaced by the College of Holy Trinity and the Church of St. Nicolas in 1380-81. The Hospital of the Holy Trinity was founded in 1395-96 and was dissolved in 1532.
The town was redefended during the Civil War (1642-49) and it is possibly to this period the earthworks and apparent tower foundations on the north side of Castle Park may be attributed. The town walls were subsequently demolished in 1659.
The northern course of the river, which is still tidal, was probably embanked in the sixteenth century and the first bridge was built in 1509. The present town bridge was erected in 1724 and was widened in 1830-31. Encroachments onto the High Street in the 1760s led to the clearing of buildings from the Market Square in 1773 and the Paving, Lighting and Cleansing Act of 1785 resulted in the production of a plan of the town which shows the extent of the developed area.
Major alterations soon followed in attempts to enlarge and improve the castle grounds. A new gateway was built in 1809 following the re-alignment of the main road to London in 1803. A new wall was built in 1833 around the newly-aquired extension to the Castle Grounds. In 1876 the Roman Catholic Cathedral of St. Phillip Neri was completed and in 1892 Mill Road was re-aligned further east to enable the Castle Grounds to be completely closed to the general public. {1}

For Arundel Borough 1586-1677 see {2}.

For the leper hospital see 2007.

Description and Sources

Description

During the excavation of a Roman villa on the S. side of Tarrant Street, Arundel, in 1983 by SAFU (report forthcoming), the floor of a Post Medieval house was found to overlie the villa. There were two tile-lined hearths in the floor and there was a well nearby, which appeared to have been filled with rubbish before C17.{1} For the villa see 2002.ü Activity Reference - 1 = WS445

Description and Sources

Description

A secular college at Arundel, founded before 1066, was granted to the Alien Benedictine cell in Arundel in 1177 when the priory was moved to St. Nicholas. The Priory was founded at an unknown site in Arundel in 1102, and dissolved in 1544.{1}

The present church and the Fitzalan Chapel both date from the second founding of the collegiate church in 1380, the former being the parish church and the latter, the chancel, being the collegiate church, now the private mausoleum of the Dukes of Norfolk.{2}{3}

Arundel Priory, a former C19 convent, occupies the site and incorporates remains of the collegiate buildings of the Holy Trinity, S. of the Fitzalan Chapel. The S. front is mostly C19 but contains some original features. The W. side is formed by the outside shell of a wall of the Medieval buildings, with windows and fireplaces in it, that has not been restored.{4}

The priory buildings are ranged around a quadrangle which is entered by an arched way in the W. side. The E. range is largely Medieval and contained the refrectory. The remains of the S. and W. ranges are as described above and all are mainted in good condition. Within the quadrangle are the footings of a flint wall, 0.2m high.{5}

ARUN DISTRICT COUNCIL AB/36/18/PL

History.{6}

Survey of organ loft, prior to removal, by FGA placed in County Record Office.{7}

The true site of the Maison Dieu at Arundel appears to be close to lie close to the parish church of St. Nicholas (see1961). The hospital was founded under the aegis of the college of secular canons which the Earl of Arundel attached to the parish church c.1380. The logical site for the hospital would be close to the church as indeed its original statutes imply. Noon prayers were to be said in the Fitzalan chapel of the church by all except the most infirm inmates; while one of the tasks enjoined upon them was the weeding of the churchyard walks. Both activities would have been difficult to carry out if it had been necessary to climb the length of the steep High St. When the present castle car park was laid out as a kitchen garden in the C19 numerous human bones were excavated, apparently from a cemetery - probably that of the Maison Dieu. {8}

A detailed report of the church path has been completed as the uneven surface posed a risk and stones had to be rebeded. Plans and complete lists of all the stones are included in the report. (9)

Also see (10).

An indenture of 1476 records the acquisition by John Dudley of Atherington of a marble tomb in Arundel collegiate church. The tomb had originally been commissioned for the use of Richard Dallingridge, who had died five years before. (11)

Athough the church appears on the outside to be a strainghtforward aisled nave and chancel with a central towe, the eastern half or Fitzalan Chapel with the Lady Chapel to the north was in fact collegaite and was originally separated from the parochial nave ant tower by an iron grille. Piers with four shafts and in the diagonals four hollows, round bases, and octagonal abaci setting up a fine large-scale rhythm through the church. The grandest is the east windowseven lights and panel tracery, made up of two subdivisions of three lights each separated by a single light running to the apex of the arch. The south side of the fitzalan chapel has four light windows with tracery heads of three quatrefoils and two quatrefoils above that. The squat central tower is ornamented with two tiers of two light bell openings under segmental arches and in very deep concave reveals. {12}

Church of St Nicholas: 1380. Dressed flint, with some ashlar flushwork, and ashlar dressings. Nave, aisles, transept and crossing of original church, screened from chancel by C15 iron grille and plate glass partition. Perpendicular Gothic forms. Fitzalan Chapel: (Roman Catholic). Built nearly contemporaneously with rest of church, to which it forms the chancel. Aisleless, but with sacristy and Lady Chapel to north, and C19 chapel to south. Founded as Collegiate chuch of the Holy Trinity, and always separated from the nave. Now the private mausoleum of the Dukes of Norfolk. Remarkable tombs. {13} {14}

A large cruciform church started around 1380. The parish uses the nave and transepts and the chancel is the funerary chapel of the Dukes of Norfolk. There is a C15 stone pulpit and in the chapel the monuments and brasses date from the C15 to the present.
Arundel is dominated by its castle and the Roman Catholic cathedral. The cathedral is C19 and the castle is a recreation of a mediaeval original from the same period. It is easy to overlook the tower of the parish church between them, though in Hollar's engraving of 1642 the lack of the cathedral means that it is more prominent. There is likely to have been a minster here before the Conquest, but the town only grew up after this around Roger de Montgomery's castle, replacing Burpham over the river as the main settlement. Montgomery founded a priory as a dependency of Sées in Normandy. The early C19 buildings south of the church, called The Priory, occupy the site of the conventual buildings – some walling could be old and a round-headed doorway and C11 or C12 stones, some with diaperwork, were found in 1847.
Most alien houses were small and the priory shared a church with the parish; it held the rectory from 1178. After a precarious existence, it was dissolved by Richard II in 1379. The 4th Earl of Arundel founded in the following year a college of secular priests in its place to serve as a burial place for his family, allegedly with plunder from the French wars. A new church, in place of one said in 1349 to be in poor repair, was started soon after the foundation, with conventual buildings larger than those of the priory. The parish occupied the nave and transepts, whilst the chancel served the college. This was dissolved in 1544, when the buildings passed to the Earls and later Dukes of Norfolk and the chancel became their private property. The Norfolks with few exceptions remained Roman Catholics, so the Fitzalan Chapel, as the chancel is known, remains separate; this may be the only surviving example of the mediaeval practice of two ecclesiastical foundations under one roof. In 1879 the then vicar, unhappy at what he saw as Roman Catholic triumphalism, fought a lawsuit, claiming the chapel for the parish church, but lost. As a consequence, a crude brick wall, on which Mee commented adversely, separated the two for 90 years until replaced by the present glazed partition.
Both parts were started about 1380. John Harvey identified several possible masons, including Henry Yevele, the king's master mason, but without documentary evidence no more can be concluded than that the mason responsible was almost certainly not local and probably close to the court, although much of the work is surprisingly plain. Though of one build, it is easier to treat the church in two parts.
Parish Church:
Despite the apparently homogenous build of the church, it contains evidence of its predecessor. The materials are flint and stone and much re-used stone is embedded in the walls, including what has been identified as Purbeck marble, with Caen and Quarr stone as well. This confirms that the earlier church was of some consequence and one fragment with dogtooth moulding suggests it included late C12 work. The relatively shallow transepts and the restrained central tower appear integral parts of the church as conceived in the late C14. However, there are grounds for suspecting that neither feature is quite as might be assumed. As regards the transepts David Parsons, in view of the fact that they are barely longer than the breadth of the aisles,has suggested that the previous church was also cruciform and that at least the dimensions of the

ARUN DISTRICT COUNCIL AB/36/18/PL

present transepts survive from this. That seems plausible, but his suggestion that the tower is also in part at least a survival from this early period is open to doubt. Noting the discrepancies in its construction, he suggests that the earlier fabric was retained and that new openings were inserted in it. In that case, it seems surprising that there is no trace of earlier work in the crossing arches beneath, which are all C14. A possible way to establish whether there is in fact any old work in the tower itself would be by careful examination of its inside. In the absence of this, it seems more probable that the tower is different because it was probably the last part of the church to be built. This need not have been until some time later and a possible clue is provided by a bequest in 1509 towards its 'bielding'. Though this could refer to repairs, the detail would be consistent with this date – both short stages have two-light openings under segmental heads and a low, leaded spire behind a plain parapet.
The late C14 aisles also have parapets, with mostly renewed gargoyles, and the aisle and transept windows have panelled tracery. There are west and south porches, the latter with a stone roof – though not old, an undated engraving in the church shows it is a faithful copy. There is also a plain wooden north porch, which is at least partly original. All doorways have square hoodmoulds with coarsely carved spandrels and the clerestory openings are encircled quatrefoils. The spacious nave has five-bay arcades. The piers, four shafts and four hollows in section, are more complex than most of the scarce late C14 work in Sussex and the crossing piers are similar but more so. They show masons' marks and possibly C16 graffiti. Also unusual for Sussex, though frequent in East Anglia, are the chamfered wall-arches containing the aisle windows.
The east crossing-arch is set in a larger one and has always contained a screen. To its north, are the upper and lower entrances to the rood-stair and the corbels for the beam remain. The altar was in the south transept, which was possibly less inconvenient when the congregation gathered around the table for communion. This arrangement lasted until 1874, along with the galleries in the aisles, possibly inserted in 1810.
The re-arrangement of 1874 was part of Sir George G Scott's restoration, which cost over £6000 but was generally faithful. Though the roofs have been replaced, this work may not have been done in 1874. It is known that in 1893 the nave roof was in a dangerous state and after J O Scott had been consulted, £1058 were spent under G H F Prynne; whatever their date, the present low pitched roofs with traceried spandrels beneath the tiebeams are likely to be accurate, at least in form. In the 1970s a pavilion-like structure was inserted into the west end of each aisle, comprising meeting rooms beneath a gallery.
Fitzalan Chapel:
Though today approached from the castle, until the early C19 the two were separated by a road. The chapel lacks proper aisles, but the detail is more ambitious than the parish church. The curves in the panelled tracery of the seven-light east window are characteristic of the late C14 and the restored south windows also have early panelled tracery, with two quatrefoils in the head. The four-light segment-headed north clerestory windows look later. The Lady Chapel is on the north side of the main one. Its east window is related to the clerestory and its north side, though renovated around 1840 is no different in the Sharpe Collection drawing (1804?), so need not all be modern, as has been claimed. The detail is some of the finest in the church. Above each four-light window of panelled tracery is stone panelling and an ogee-shaped label, rising above a fretted parapet. The chapel was in use by 1421, when the 6th Earl was buried there, so that probably provides an end-date for this slightly later work. Three identical though separate arches from the main chapel look part of the original building, and do not support the belief that a chapel was planned further east, where there is a low sacristy, featureless beyond a doorway dated 1842, but also probably mostly original.
The wooden vault of the chapel dates from 1886, re-using fine original bosses, including bearded heads (possibly prophets) and angels, which are in a darker wood. Most fittings also date from 1886, but the impression of a mediaeval funerary chapel remains, with a clutter of monuments and brasses, which are listed below. Most monuments are to Fitzalans or Howards (now the Fitzalan-Howards) and the mediaeval brasses are to members and associates of the college. South of the altar is the chantry-tomb of William, 9th Earl of Arundel (d 1487) and his wife. Its three openings are separated by twisted columns, each with a tall ogee-shaped label. Inside is a pendant vault and on top are pinnacles. It has been altered, probably in the C19 and again in 1982, when the effigies, which had almost touched the vault, were replaced in a more visible position after cleaning. They were then found to retain traces of the original coloured decoration and were dated to soon after the Countess's death in 1462.
After the college was dissolved, the chapel in the late C16 attracted the interest of Lord Lumley, son-in-law of the 12th Earl of Arundel, who had antiquarian interests and great family pride. He undertook substantial repairs and added a monument to his father-in-law in 1592. Remarkably, this resembles a chantry and commemorates not only his father-in-law but also Thomas, 10th Earl (d 1524), with the 11th Earl. The bulging columns and arched balustrade are clearly later in style, as is the flat vault. The flat tomb-chest lacks effigies.
Later C17 and C18 monuments are lacking, for the Dukes largely abandoned Arundel. The chapel was desecrated in the Civil War and was subsequently treated in many ways as part of the parish church, with visitations by archdeacons and bishops. That of 1724 recorded the interior as 'quite indecent and sordid'. In 1782 the roof was removed and though some bosses were retained, others are now in Poling church. The chapel was used as a workshop and repairs only started in the 1830s under R Abraham, much later than at the castle. An engraving of 1844 shows a plain plaster ceiling and chaotic fittings. Around 1864 M E Hadfield added a small south chapel, for the 14th Duke's monument. C A Buckler brought the chapel into its present form between 1885 and 1902, as part of his reconstruction of the castle. {15}

A secular college, founded before 1066, was granted to the Alien Benedictine cell in Arundel in 1177, when the priory (sic) was moved to St Nicholas. This priory was founded at an unknown site in Arundel in 1102 as a cell of Seez., and dissolved before 1379. In 1380, the church again became collegiate; the college was dissolved in 1544. The present church and the Fitzalan Chapel both date from the second founding of the collegiate church in 1380, the former being the parish church and the latter, the chancel being the collegiate church, now the private burial place of the Dukes of Norfolk. St Winifred's Priory, a 19th century convent of Servite Nuns, occupies the site of and incorporates remains of, the collegiate buildings of the Holy Trinity, South of the Fitzalan Chapel. The South front is mostly 19th century but contains some original features. The West side is formed by the outside shell of a wall of the Mediaeval buildings, with windows and fireplaces in it, that has not been restored for habitation. The priory buildings are ranged around a quadrangle which is entered by an arched way in the West side. The East range is largely Mediaeval and contained the refectory; the South range, formerly the Priors house, and remains of the West range, the church and chapel are as described above.

Monument Types and Dates

MOTTE AND BAILEY (Early Medieval/Dark Age to Post Medieval - 1000 AD to 1800 AD)
Evidence STRUCTURE

Description and Sources

Description

Arundel Castle was founded by Roger de Montgomery before 1070 and, like Windsor, was divided into two wards with the mount in the re-entrant angle between them. The keep and curtain walls are C12 and C13 respectively but the domestic buildings in the SE. of the castle are C18-C19 reconstructions of that portion of the castle destroyed in the Civil War.{1}{2}{3}{4}

Three fishponds below the castle to the E., now ornamental features, are probably Medieval features.{5}

The monument includes a motte& bailey castle at its centre, the outer bailey area to the NE, the square earthwork known as the bowling green and the fishponds on the E side of the castle grounds. The first castle comprised a central motte 75m across at its base and 20m high, and two baileys, one on each side of the motte. The shell keep on top of the motte, which measures 20m x 18m across and has walls 9m high, is a C12 replacement of the first timber keep erected by Roger de Montgomery before 1070. To the NE of the original castle is a nearly square outer bailey some 350m across, originally with strong earthworks on all sides except the NE where steep slopes provided sufficient defence. On the N side the bank and ditch together measure 35m across. The lower levels of a stone gatehouse survive at the gap in this northern earthwork. A slighter bank and infilled ditch extend westwards between Park Gates and London Road for additional defence. This and the 35m-square 'bowling green' are likely to have been used to strengthen the castle during the Civil War. There are three fishponds to the E, up to 63m long and 15m wide. The buildings around the quadrangle are not included in the scheduling, having been extensively altered in the C19 & C20 and currently listed Grade I. The ground beneath them, however, is included. All other modern structures such as the building at St.Mary's Gate, the pavilion and the surfaces of all roads and paths are similarly excluded; the ground beneath them included. The reservoir to the N is excluded from the scheduling.{6}{7}

For examples of Coade stone see {8}. For the Medieval town and its defences see 1957,1958.

TOWN DEFENCES (Medieval - 1066 AD to 1539 AD)
Evidence EARTHWORK

Description and Sources

Description

Arundel was established as a borough between 1066 and 1086 (see 1957). The castle was founded c.1070 (see 1959). The town was defended on the E. and S. by the marsh and river respectively, but on the N. and W. a wall was added in 1295 to pre-existing defences.{1} Two series of defences appear to N. and W., an inner and an outer. The most northerly has been alleged to have been the defences of a promontory fort, but an account of 1275 refers to the making and raising of the palisade which had fallen down from the gate of Bogerwerth to the gate in the valley. The gate of Bogerwerth has been equated with that at TQ01490764 and if this is correct it must imply that the earthworks were at least used as a Medieval defence. Eustace identifies two mounds at the extreme angles of the vallum as possible sites of towers. Foundations were found in the enclosed area and suggested to have been part of the town pre-1295 (see 1963). The course of this pre-1295 palisade is uncertain. The mention of two gates and the omission of Mary Gate may indicate the outer course. Dallaway says these (northern) earthworks were increased when the town and castle were put into a tenable state by Lord Hopton before the siege. Eustace suggests that he reused the 'old British Fosse' and constructed a wide ditch from its NW. angle down to the marshy ground of Park Valley. The inner defences were made up of a ditch and wall running from the castle wall to St. Mary's Gate and SW. down Mount Pleasant and then S. to Water or Marsh Gate and the river. This wall appears to have been built in 1295. It has been suggested that the name Whytings Dyke applied to a wooden palisade fixed between a row of lime trees which stood along Mount Pleasant.{2}{3}{4}{5} The name Bogerwerth may apply to St. Mary's Gate, possibly the name it held prior to the founding of St. Mary's Chapel (see 1960).{6}

CHAPEL (Medieval - 1400 AD to 1499 AD)
Evidence RUINED BUILDING

Description and Sources

Description

St Mary's chapel, Arundel, was founded in 1415. The N. wall with its original arched doorway still remains, in an excellent state of preservation.{1}{2}{3} The E. wall also seems to survive for a distance of 9m.{4} St Mary's Chapel is now thought to have existed as a lady chapel over St Mary's Gate. The N and E walls of a building visible in the NE corner of the Castle car park have now been identified as part of a building of Holy Trinity Hospital (the Maison Dieu), founded c. 1380, and dissolved 1546. A 14th-15th century doorway is still visible in the N wall, and a blocked door in the east wall. The Maison Dieu was formerly identified with 1961 (qv).{5}{6}

PRIORY (Religious building, Medieval - 1200 AD to 1299 AD)
Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

A Dominican Priory was founded at Arundel before 1253 and disolved in 1538. It stood on the N. side of Maltravers Street, about halfway down. Nothing now remains of it.{1}{2} Tierney identified this site with that of the Dominican Friary in 1834 on the basis of a church visible below St Nicholas' in Hollar's view of Arundel of 1644. This church is now thought to have been added as a matter of artistic licence by Hollar. The Dominican Friary is now firmly identified with the remains formerly known as the Maison Dieu ((1961). {3}{4}

Description and Sources

Description

A trench (1.3m x 1.8m) was excavated at Blackfriers, prior to laying paving slabs to determine whether further walls of the south ranges could be located. Much of the area was disturbed by tree roots, some medieval pottery and some building material was recovered but there was no evidence for further buildings to the east of the standing structures. {1}

Description and Sources

Description

A test pit was excavated to a depth of more than two metres behind the retaining wall of the quay at NGR TQ 0100 0600 A2, to determine the nature of the problem with the settlement and fracturing of the parapet wall. This revealed that the backfill behind the wall was no earlier than late C18-C19, waterlogged and extremely unstable, this is consistent with the documentary evidence which suggests that it was last rebuilt in 1813 and an addition made in 1825. {1}{2}

Description and Sources

Description

Six trenches were excavated at NGR TQ 0175 0700 at Ninevah Shipyard in 1992 in order to assess the archaeological potential of the site. The site was covered with modern concrete and hardcore, and all the layers up to 1.6m down contained post medieval or modern brick, there were two features: a pit containing modern bricks and a large depression containing a layer of sawdust. None of the buildings on the site are of any great age. {1}

Evidence STRUCTURE

Description and Sources

Description

The high winds in 1987 damaged the earthworks around St. Mary's Gate, revealing some masonry at NGR TQ 0155 0733. Two trenches were excavated on either side of the gateway allowing for a plan to be constructed. It consists of two parallel walls, at each end on the inner face is a stepped offset, 2.50m long x 0.70m wide at the base, they probably consisted of 2 or 3 steps. It is 10.00m wide (0.6m short of being square in plan). A large amount of weathering and robbing has occured, and no rebuilding was carried out at any stage. It is thought to be mid-late C11. {1}

Description and Sources

Description

A chalk and flint wall footing was discovered on July 11 1995 by Dr C Waite (TQ 0155 0694) while excavating a drain run. It was oriented WSW-ENE was 2.12m long within the drain run, 0.4m in width and survived to a depth of at least 0.25m (only the top was exposed). It appeared to be constructed of chalk rubble and nodules of flint, in a gravelly mix, with occasional fragments of pink gritty mortar and inclusions of large fragments of Roman tile. {1}

Description and Sources

Description

The Hospital of Holy Trinity Maison Dieu, Arundel, was founded in c.1380 and dissolved in 1546.{1}

It was built in 1395.{2}

The remains of two buildings are extant. To the N. of the modern road there are fragmentary stretches of chalk random rubble walling with greensand dressings, of a building 24m by 9m ., the walling standing to a height of 4m. There are no datable features. The S. wall extends beyond the building westwards for 8m. S. of the road is a more complete building , 16m by 8m, with walls standing to 6.5m in height at the gable ends. Lower walling is of chalk, the upper of rough knapped flints. Door and window openings show greensand dressings, but the remains are insufficient to date.{3}

The ruins known as the Maison Dieu or the Hospital of the Holy Trinity on the bank of the River Arun outside the Mill Road Lodge of Arundel Castle, revealed disappointingly little information during small-scale excavations by Worthing Museum. The excavation at the north range revealed the innner or south wall of the north range and a floor glazed with tile, although much disturbed by a later rubbish pit. Investigation made outside the north range in an area soon to become a carpark revealed the unrobbed base of a butress below the present ground surface with an area of cobbing along side it. The excavations at the west range revealed the concrete floor of the malthouse (early 18th to mid 19th century). An 18th century brick hearth occupied the north-west corner of the range and the west wall had been altered by filling up the series of embrasures with flint packing, with the exception of the northern-most which had been reconstructed as a doorway. {4}

The location of the Dominican friary or Blackfriars at Arundel has long been a puzzle. Tierney, in his History of Arundel, 1834, indentified the site of the friary church on the basis of a drawing by Wenceslaus Hollar in 1644. This shows the parish church on the skyline and another which was later taken for the friary. However, Hollar's drawing does not appear to be an accurate view of Arundel at that time and may have been produced from sketches which Hollar took to Antwerp when he followed the travels of the Earl of Arundel. The second church appears to have added for artistic effect. The true site of the friary is clear from documentary sources and is represented by the remains of the south range of the mediaeval building standing beside Arundel bridge now known as the Hospital of the Holy Trinity or Maison Dieu. The identification of this building as the Maison Dieu, which has been generally accepted until now, goes back no further than a note in the Gentleman's Magazine of 1793. On the other hand, a drawing of this range by S.H. Grimm, 1780, is captioned 'The Chapel of the Friary at Arundel'. Late mediaeval and subsequent documents support this suggestion. The true site of the Maison Dieu appears to be close to the parish church since the hospital was founded under the aegis of the college of secular canons with which the parish church was endowed in c.1380, by the Earl of Arundel. See 1957.{5}{6}

A complete photographic record and measured drawings were made of the medieval wall at the entrance to the Post Office sorting office in 1992. {7}

Worthing Arch Soc archive {8} seems to relate to the 1965 excavations {4}.

Brief report of 1965 excavations {9}.

Activity Reference - 4 = WS322

Earth Resistance and Ground Penetrating Radar (GPR) surveys were undertaken at the Dominican Friary Ruins, Arundel. Both successfully identified evidence for archaeological remains, although this evidence was limited to areas with associated surviving above ground structural remains. Evidence for two masonry footings has been interpreted within the upstanding remains of the friary's south range, and three areas of strong subsurface reflectance close to the upstanding remains of the friary's north range have been interpreted as masonry footings, perhaps robbed out after the friary's dissolution. Both surveys also indicated disturbance across the site relating to the construction of buildings, roads and footpaths that limit the effectiveness of geophysical survey techniques. {10}

1395. Former hospital of the Holy Trinity. Some ruinous walls of coursed rubble, including flints and clunch. Extends both sides of road.{11} {12}

Description and Sources

Description

A Roman pavement and tiles, etc., found at the W. end of Tarrant Street, Arundel, in c.1896. In Lewes Museum.{1}

Traces of a heated room, possibly late C1 or early C2, were found in a roadworks trench outside 60 Tarrant Street. A chalk wall running in the direction of the river cut through hypocaust tiles. Some black and white mosaic, diamond-pattern flue tiles and roofing tiles were also found.{2}

The line of the trench was still visible in 1970.{3}

Further discoveries were made in 1976 when the owner of 95 Tarrant Street was lowering the floor of his cellar. At 1.7m below the pavement level (at c.4m OD) a 'floor' level was located beneath the N. wall of the house, but this had apparently been destroyed within the cellar area, and a chalk-lined well was found partially underlying the W. wall.{4}

Excavations were carried out by SAFU in 1983 (report forthcoming) on the S. side of Tarrant Street on a plot of derelict land (now developed). A Post Medieval house and well (see 2003) were found to overlie the S. end of a C1 villa. When SEGAS put a new pipeline along the whole length of Tarrant Street in 1984, a wall was found running running N-S. through the trench. It was faced with plaster and associated with quite a lot of broken tegulae and imbrices.{5}

Included in Black's list of Roman villas. Tiles of c.75-80AD and c.90-110AD were found during the excavation.{6}

Included in the Sheldon list of Roman Villas.{7}

Description and Sources

Description

An archaeological evaluation was carred out prior to the building of a swimming pool. No archaeological features were found. The only finds included fragments of post medieval building material; brick, peg-tile and slate. Also a number of nails and pot sherds of the same period. Three oyster shells were noted with a small fragment of greensand and two fragments of Horsham stone tile, one small late medieval potsherd, and two medieval flint waste flakes which could either be prehistoric or knapped in a later historic period.{1}

Description and Sources

Description

A brief archaeological interpretative survey took place at 33 High St, Arundel to give an overview of the date, sequence of construction, and principle architectural features of a building. Sequence of development - The late C16 - early C17 structure consisted of a continuous-jettied main range running parallel to the street frontage with a southern rear range which incorporated lean-to outshuts along its northern and western sides. The building was always floored throughout and its front range comprised two rooms on both levels. The layout within the rear range is more difficult to ascertain due to later works. During the mid-C17 a two-flue chimney was inserted against the rear wall of the front range to heat the parlour and chamber above. In addition modifications were made to the first floor doorways. Various improvements were made in the late C18. The front facade was clad with mathematical tiles and the rear and lean-to outshuts were heightened to give additional first floor rooms. Already by this date the side wall of the outshut had been reconstructed in brickwork, and this was retained when the wall was raised. As part of the new alterations a new fireplace was intruded into the rear of the parlour fireplace, facing south. More recent alterations have 'gutted' the interior of the ground floor to make a large open plan space. All that remains of the ground-floor front wall is the boxed- jetty plate, now supported by a series of iron posts. The floor level within the main range was originally set above that of the rear range and street in order to allow room beneath for a cellar. This cellar was now made redundant by lowering the ground floor to the same level as that within the rear range. As a result of this alteration the jambs to the C17 ground floor fireplace were extended down to the new revised ground-floor level, thus ruining the proportions of the fireplace. The C17 chimney itself has been demolised down to the level of the first floor. The first floor framing has been masked by studwork supporting plasterboard wall cladding, whilst all common rafters within the roof to this range have been replaced in softwood. The northern ground-floor wall of the late C16-early C17 rear range is now carried on brick piers which in turn support RSJs. Much of the floor joisting within the area has also been replaced, whilst the late C16-early C17 rear range has been entirely removed - so too has the original staircase which appears to have been located adjacent to it. The roof over the late C16-early C17 rear range has been constructed in softwood, the northern slope having been replaced by a massive, full height, flat roofed 'dormer' extension. The southern slope appears to replicate the original slope. To the north of this, the roof over the late C18 stud walls to the raising have been reconstructed in modern rendered brickwork. At some post-late C18 date a further chimney had been intruded into the western end of the wall dividing the C17 and late C18 ranges - this has now been removed.ü The late alterations at were carried out at various times, but many of the more damaging modifications appear to be very recent - possibly the result of a phase of 'renovations' carried out in 1987 (Date of 1987 pers. Comm. Representative of French Joinery).{1}

C17. Timber-framed, 1st floor brick, Pitched slate roof (Drawing shows house circa 1820-30 with a 3rd storey and shallower pitched roof). 2 storeys, 1st floor jettied (bressummer obscured by fascia board). Moulded wooden eaves cornice, Modern shop front on ground floor. 2 flush-framed windows on 1st floor with moulded embrasures and modern casements with glazing bars. 2- and 3-storey extensions to west, all rendered. {2} {3}

WALL (Built, (between) Post Medieval - 1837 AD to 1900 AD)

Evidence	EXTANT STRUCTURE
Evidence	Survey

Description and Sources

Description

An archaeological evaluation and watching brief was carried out at The Slipe, Arundel, in advance of residential development of the site. The site is located to the south-west of the centre of Arundel.
The watching brief consisted of the monitoring of the northern 10m of a service trench where it came close to the street frontage. There was much disturbance from modern services along the length of the trench to the depth exposed. The basic stratigraphy consisted of a 700-800mm layer of modern mixed ground, which included made ground for the foundation of the access road. Silt was only exposed at the northern end of the trench where excavations were deeper. The silt contained flint and chalk inclusions as well as Victorian clay pipe, pottery, glass and Welsh slate. Resting above the silt on the eastern edge of the trench was the remains of a north-south brick wall on a concrete foundation. Its position and construction suggest it to be of Victorian or later date.
The evaluation consisted of a test pit measuring 1.5m by 1.5m within the footprint of Block H. The natural Chalk/Coombe Rock was encountered at a depth of 2.54m below the present surface. The test-pit could not be entered due to the depth and relative instability of the sides, but the surface of the"natural" appeared to have been heavily truncated. The overburden was a deposit of modern debris including brick, timber, plastic and metalwork. No archaeological features were visible and no artefacts were recovered from the overburden. {1}

Description and Sources

Description

No Archaeology was recorded during the evaluation of the site. The underlying alluvium was recorded usinf sedimentological nomenclature, and a fining-up sequence was recorded, several 'pinch' samples were also taken from discrete parts of the sequence which were demonstrably rich in ecofacts to coarsely characterise the environmental regime of the River Arun. SMR Number	Site Name	Record Type
MWS8310	Arundel Castle Car Park, Arundel - Excavation and Evaluation Report	Monument

The excavation confirmed the presence of medieval remains believed to be that of the Holy Trinity Hospital or 'Maison Dieu'. It also identified a post-medieval building thought to correspond to a structure shown on 1785 and 1807 cartographic sources, and revealed a number of other post-medieval features including path surfaces.

An archaeological evaluation was undertaken at Arundel Castel Car Park, Arundel before the current car park was converted into a formal garden.
The evaluation consisted of 8 trail trenches which measured 15mx1.4m (x2) and 20mx1.4m (x6). All but one of the trail trenches produced archaeological finds and features.
The evaluation identified the remains of substantial stone built structures across the northern half of the site and a post-medieval stone built dwelling in the southern extent of one of the trenches.
It was suggested that the evaluation had most probably located part of the medieval 'Masion Dieu' hospital complex which was believed to have previous stood on the site during the medieval period. The presence of packed mortar floor surfaces and substantial wall footings suggested that the structure had more than one level as well as being a dwelling.
Furthermore archaeological evidence for a street system along with a small stone structure on the east of the site was also seen during the evaluation.
Overall the site was believed to have high potential for archaeological deposits.

Description and Sources

Description

An archaeological excavation was undertaken prior to the conversion of a car park at Arundel Castle into a formal garden, containing a number of structures and water features. A watching brief was also maintained on the areas of overburden stripping and where deeper excavations was necessary to accommodate garden features. The excavation area encompassed the deposits which would be removed by the construction of an east-west terrace retaining wall. The main additional features recorded during the watching-brief were the remains of a glass greenhouse which occupied the north-western part of the site until 1975.

The site is bounded to the north and east by walls of medieval date which are likely to have formed part of the hospital fopunded in the 14th century. Walls of later date continue to the east and south to form an enclosed area. The fragments of foundationd uncovered indicate that the site was the location of a medieval building or buildings within a courtyard. They are substantial enough to suggest buildings, possibly two storey, with well-constructed flint and chalk walls. The evidence points to these being part pf the complex known as The Holy Trinity Hospital or 'Maison Dieu'. The excavation uncovered the remains of the building shown on the 1785 and 1807 maps. It was a fairly poor structure which included a celler and a possible lean-to, and the walls incorporated material presumably reclaimed from the medieval buildings. The evidence suggests that it was demolished in the first half of the 19th century. Remains associated with the greenhouse knownto have occupied the western part of the site when it was a kitchen garden were recorded. {1}

An archaeological evaluation was undertaken at Arundel Castel Car Park, Arundel before the current car park was converted into a formal garden. It was believed that the site itself was the location of the Holy Trinity Hospital or the 'Maison Dieu' dating to the medieval period.
The evaluation consisted of 8 trail trenches which measured 15mx1.4m (x2) and 20mx1.4m (x6). All but one of the trail trenches produced archaeological finds and features.
Within the first trench substantial wall footings made from large chalk blocks were exposed and survived in good condition. The size and location of these wall footings strongly suggested that they were once part of the 'Maison Dieu' complex. A cess pit was also identified within the same trench as well as ceramic building material (CBM), slate and flint which was most likely associated with a mid-20th century greenhouse. A series of much smaller wall footings were also revealed in this trench.

Within a second trench a number of wall footings were also revealed which would appear to be contemporary to the footings seen in the previous trench. A large circular pit was also exposed which was filled with demolition rubble comprising mainly of nodular and struck flint. Within the pit there was also an abundance of post-medieval material such as clay pipe, glass, nails and CBM. A sub-circular pit with vertical sides and a flat bottom and filled with 19th century materials were also exposed during the evaluation.
A following trench revealed a linear feature which contained a chalk wall footing believed to be part of the 'Maison Dieu', another linear feature was also uncovered however this had to be abandoned due to health and safety concerns. A patch of chalk and mortar floor surfacing believed to be part of the 'Maison Dieu' complex was also discovered.

ARUN DISTRICT COUNCIL AB/36/18/PL

SMR Number MWS8310 **Site Name** Arundel Castle Car Park, Arundel - Excavation and Evaluation Report

Within one trench all that could be revealed was a flat-bottomed ditch however a following trench revealed a very large sub-circular feature. Within the feature two dump deposits were visible, one of chalk and mortar rubble. It was believed that the large pit could be related to the medieval settlement of the site. Within the same trench the remains of a lane which showed several phases of repair was exposed. This lane could be seen on the 1785 Plan of the Borough of Arundel.
Another trench exposed a metalled surface butted up against two wall footing. It was suggested that the wall footings were most likely associated to the Maison Dieu complex while the metalled surface was most likely a cobbled surface dating to 1785.
Within another trench another metalled surface was uncovered and again this was believed to be associated to a post-medieval street as seen on the 1785 plan.

Overall the site was believed to have high potential for archaeological deposits.{2}

Description and Sources

Description

Historic building fabric assessment of the walls surrounding the cellar access at 41 High Street, Arundel. The building dates to the medieval period with the remains of a timber frame two-storey structure fronting onto the High Street, including a stone cellar which may predate the current standing medieval remains. The building was extended at the rear (west) with the addition in the first instance of a narrow bay of taller storey height than the medieval remains. The new bay housed the inserted cellar access which may date to the 17th century. The 18th century saw the addition of partition walls of stud work construction with lath and plaster infill. A doorway of 18th century date remains in situ forming the western side of the modified cellar access. There had also been a doorway on the south side of the stair well which was infilled in modern brick in the 19th or 20th century. Later extensions to the rear of the building includes a large two-storey structure of early 20th century origin.
It is clear from the structural details that the north wall is added to the rear of the medieval building. The medieval remains are evidenced by substantial timber posts, the sill beam and the east - west orientated beam over the brick wall that divided two rooms. The brick dividing wall itself is a late insertion with brickwork consistent with a 19th century origin.
It is probable that the cellar is also part of the medieval phase of construction on the site; the masonry within the cellar comprises very large hewn blocks, but little else in the form of clearly datable features. The stud work walls of the cellar access are situated over a masonry wall to the north side of the stairs and a brick faced wall to the south side. The brickwork may be of 17th century origin and it is clear that a timber plate on the north side of the access at least, had been added to the base of the medieval sill beam prior to the addition of the plate that forms the base of the north stud-work wall. This suggests that at this stage in the development of the building (17th century) it is possible that a room and the cellar access were part of a single extension added to the rear of the main build, perhaps with newly-created alternative cellar access with a hatch over. {1}

C15 or C16. Formerly Crown Commercial Inn. Timber-framed, Refronted in C18 with brick, painted white. Partially slate-hung behind. Hipped tile roof, Red brick chimneys, 3 storeys. Brick modillion cornice. Parapet. 6 bays, with 3 more openings on ground floor, an open archway to Crown Yard, with plain chamfered bressummer. Modern doorway to 41A. No 41 has 1 doorway with panelled reveals, and a modern shopfront. On north side of doors to Nos 37, 39 and 41 are 3-light canted bays on both ground and 1st floors: plate glass on ground floor level, double-hung sashes with glazing bars at 1st floor level. Remaining windows on 1st and 2nd floors are double-hung sashes with glazing bars, that over No 41 tripartite. The 2 windows at the north end of the 2nd floor are blocked. No 41A has a 2 storey extension to west. Early C19. Beach flint. Red brick dressings. Pitched tile roof. South elevation has 2 planked doors with segmental heads on ground floor, 1 loft door on 1st floor, and 2 segment-headed casement windows wit glazing bars on each floor. Other west extensions masked by these; but they are timber-framed and have half-hipped tile roofs. In the C18 the Crown Inn belonged to the Shelleys of Michelgrove, and was the political centre of the Tory party in Arundel. {2} {3}

Description

War memorial {1}:
UKNIWM Ref: 16626
Type: Cross
Inscription: Unknown
Physical Description: VERY TALL LATIN CROSS ON OCTAGONAL PLINTH, SET ON ELEVATED BRICK PLATFORM WITH FLOWER BEDS.
Wars Commemorated: First World War (1914-1918) and Second World War (1939-1945)
Ceremony: Not known
Craftsmen: Not known

First World War memorial, 1921, with later additions for the Second World War.
The war memorial is in remembrance of the men of Arundel lost in the First World War. It was unveiled on 24 July 1921 by the Lord Lieutenant of Sussex, Lord Leconfield. The names of those who died in the Second World War were added to the top of the lower stage of the plinth, and the First World War inscriptions and names have been renewed.
The memorial originally stood in the middle of the roadway, but since 1921 the memorial's base and the surrounding area have been remodelled to create a broader traffic island.
The memorial comprises a tall Wealden sandstone Latin cross, carved on the front and rear faces with Celtic crosses in relief, which echo temporary wooden grave markers. The octagonal, three-stage base comprising upper, middle and lower plinths, which originally stood on three steps, has slayed corners. The lowest stage is surrounded by a lower brick and flint wall. The wall has a low metal railing on top.
The upper stage of the plinth is dated 1914/ -/ 1918 and 1939/ -/ 1945. A dedication and the names of those who died during the First World War are inscribed on limestone slabs around the middle stage:
THEY WHOSE NAMES ARE RECORDED/ ON THIS MEMORIAL/ WERE NUMBERED AMONG THOSE WHO/ AT THE CALL OF KING AND COUNTRY/ LEFT ALL THAT WAS DEAR TO THEM/ ENDURED HARDNESS, FACED DANGERS/ AND FINALLY PASSED OUT OF SIGHT/ OF MEN BY THE PATH OF DUTY AND SELF-/ SACRIFICE. GIVING UP THEIR OWN LIVES/ THAT OTHERS MIGHT LIVE IN FREEDOM/ LET THOSE THAT COME AFTER SEE TO IT/ THAT THEY ARE NOT FOTGOTTEN (93 NAMES).
The middle stage is topped by a low railing which was added after 1921. the 26 Second World War names are recorded on limestone blocks let into the top of the lower stage of the plinth. The space between the enclosing wall and the lower stage forms a flower bed. The memorial is set within a cobbled area, with raised flower beds at either end to match the bed created around the base of the memorial. {2}

MWS9505	Crown Yard, Arundel - Watching Brief	Negative Evidence

The watching brief has confirmed that the level of impact on any potential archaeological deposits is likely to be low to very low.

Monument Types and Dates

Negative Evidence (Unknown date)

Evidence Excavation/Evaluation

Description and Sources

Description

The watching brief has confirmed that the level of impact on any potential archaeological deposits is likely to be low to very low. Monitoring confirmed a minimum depth of 1 metre of made ground covered the site area. The archaeological monitoring of the development was multi staged and comprised of an initial monitoring of a preliminary phase of ground reduction / levelling to prepare a level ground surface in advance of piling. The second phase of monitoring was undertaken during pile installation. Piling was progressed using flight auger rotary pile rig. A total of 14 piles were drilled using 22cm diameter auger bit. The flight auger phase of piling confirmed a minimum depth of 1 metre of made ground covered the site area. The made ground consisted of modern debris (20th century) of mixed ceramic building material some ash and glass fragments. Clay silt is interpreted as an alluvial deposit and was recorded in all augered boreholes with an upper contact height at c.100 metres below ground level. Water ingress occurred in all pile holes that appeared to be tidally influenced. Contact to firm bedrock (upper chalk) suggests the site may be sited on a localised chalk depression that has been in filled with alluvial deposits. A final phase of monitoring was undertaken during ground beam installation. {1}

CURTAIN WALL (Built, (between) Medieval to Post Medieval - 1066 AD to 1540 AD)
- Evidence: EXTANT STRUCTURE
- Main Building Material: STONE

GATEHOUSE (Built, (between) Medieval - 1067 AD to 1099 AD)
- Evidence: EXTANT BUILDING
- Main Building Material: STONE

GATEHOUSE (Altered, (between) Medieval - 1167 AD to 1199 AD)
- Evidence: EXTANT BUILDING
- Main Building Material: STONE

GATEHOUSE (Altered, (between) Medieval - 1267 AD to 1299 AD)
- Evidence: EXTANT STRUCTURE
- Main Building Material: STONE

CASTLE (Built, (between) Medieval - 1500 AD to 1532 AD)
- Evidence: EXTANT BUILDING
- Main Building Material: STONE

CASTLE (Altered, (between) Post Medieval - 1767 AD to 1799 AD)
- Evidence: EXTANT BUILDING
- Main Building Material: STONE

CURTAIN WALL (Altered, (between) Post Medieval - 1867 AD to 1899 AD)
- Evidence: EXTANT STRUCTURE
- Main Building Material: STONE

CASTLE (Altered, (between) Post Medieval to Modern - 1890 AD to 1903 AD)
- Evidence: EXTANT BUILDING
- Main Building Material: STONE

CHAPEL (Altered, (between) Post Medieval to Modern - 1890 AD to 1903 AD)

GREAT HALL (Altered, (between) Post Medieval to Modern - 1890 AD to 1903 AD)

Description and Sources

Description

Lower part of gatehouse possibly late C11, built for Roger de Montgomery, who was granted Arundel by William the Conqueror. Middle stage of gatehouse, keep, and cellars under south-east range appear (stylistically) to date from late C12; possibly from tenure of Earl William de Albini. Barbican, upper stage of gatehouse, north-west buttress, and well tower to keep, appear (stylistically) to date from late C13, possibly from time of Richard, 1st Earl of Arundel, who received the grant of a fair to help repair the castle. Curtain and towers round north end also medieval, but of uncertain date, and restored in late C19. North-east range may have been rebuilt in early C16, possibly by William, 11th Earl of Arundel. The North-east, south-east and south-west ranges were rebuilt by 11th Duke (succeeded in 1786, died in 1815), keeping to existing outline of buildings. Of this rebuilding only the Library, completed in 1801, survives. The campaign was completed by 5th June 1815, when the Baron's Hall was first used. Chapel, Baron's Hall, remainder of south-west range, all of south-east range apart from cellar, and all of north-east range above, and north of the library, rebuilt 1890-1903. This rebuilding was largely a thorough-going purge of all the details, substituting C13 ones for Teasdale's C15 ones. {1} {2}

Description and Sources

Description

Mid C19. Terraced houses. Ground floor red brick, with black brick stringcourses and voussoirs. Ashlar window sills. 1st floor timber-framed. Pitched tile roof with bands of fish-scale tiles. Red brick chimneys with black brick stringcourses, and much cornicing. 2 storeys. Both houses have 1 segment-headed oak door with ashlar steps up (3 to No 2, 2 to No 4), and one 3-light casement window with segmental relieving arch and diagonal lead glazing bars. 1st floor jettied, coved moulding at ends of joists, some of which are taken on brackets standing on ashlar corbels. Both houses have a gable end to the street with bargeboards and some projecting purlins. No 2 has 1 single-light easement and one 2-light casement, both with diagonal lead glazing bars. No 4 has one single-light casement, and 1 mullion-and-transom window with casements, both with diagonal lead glazing bars. {1} {2}

Description and Sources

Description

Mid or late C18. Red brick with grey headers (Flemish bond). Late C19 pitched tile roof with overhanging eaves and wooden eaves cornice on consoles. Brick blocking course to gable ends, with tile coping, and taken on kneelers. Late C19 red brick chimneys with cornicing. 2 storeys and attics. 3 window range, of which 2 flanking ones have canted bays on both floors with double-hung sash windows with glazing bars, and moulded cornices above each floor, space between storeys is weather boarded and sprocketed, from ground floor upwards these canted bays are late C19 [photograph of circa 1870]. West canted bay has cellar window at pavement level. Central window range has 1 segment-headed double hung sash window on 1st floor, and on ground floor 1 door with 4 moulded and fielded panels in lower half, and glazed panels in upper half, set in panelled reveals, surrounded by a moulded embrasure with triple keystone, and prominent pediment over, taken on consoles. 5 limestone steps up to door, flanked by iron railings with 2 bootscrapers, 2 baluster motifs and 1 urn finial. {1} {2}

Description and Sources

Description

Late C18. Terraced house. Red brick. Ripped slate roof. Late C19 red brick chimneys with brick tumbling and much cornicing. 3 storeys and basement with area. Brick eaves, cornice with cyma recta modillions. 6 ranges of double-hung sash windows with glazing bars (no glazing bars on ground floor). House has a 2 storey extension to east, of grey headers with red brick dressings, modillion eaves cornice and pitched slate roofs. No 55 has 1 double hung sash window with glazing bars on the 1st floor, and 1 doorway up 4 ashlar steps arched over the area, and framed by unfluted Roman Doric 3/4 columns carrying a dentilled pediment. Door with 6 fielded panels and semi-circular fanlight in panelled reveals. Area has 1 basement door, 1 modern basement window and 1 double-hung sash basement window with glazing bars to No 55. Iron railings in front of area: No 55's late C19 with bulbous finials. {1} {2}

Description and Sources

Description

Mid C18 [on 1785 map]. South and west elevations mid C19. East elevation nodular flint with red brick dressings. South elevation brick, painted grey. Hipped tile roof. Red brick chimneys. 2 storeys, Brick modillion eaves cornice. South elevation has 3 double-hung sash windows with glazing bars on 1st floor; 2 without glazing bars on ground floor. 1st floor windows have modern louvred shutters, ground floor windows have elaborate cast iron window boxes. Doorway with shouldered architrave, triple keystone and consoles which formerly supported pediment. 4-panelled door with some glazing. Verandah to ground floor of south elevation: upright posts have capitals from which spring 4-centred arches carrying modern lean-to roof; tiled floor. At east end of verandah is a wooden porch to road. Gabled front, supported on Plain posts, tiled floor, flanked by iron railings with spear finials, approached by 6 ashlar steps. Planked door with hand and laurel wreath knocker. Retaining wall to south of garden. red brick with battered brick coping. {1} {2}

Description and Sources

Description

Late C18 [but marked on 1785 map]. Formerly one house. Red brick with grey headers. Hipped tile roof. Red brick chimney with some grey headers. Brick modillion cornice. East flanking bay has overarched Venetian window motif on ground floor, consisting of 3 casement windows with glazing bars, a blind fanlight over central casement, and broad flutes placed radially between fanlight and outer relieving arch, itself surrounded by a course of grey headers. Nos 50 entered on east elevation by 1 segment-headed planked door each. No 50 has 2-storey brick outhouse to north, part painted, part rendered. Pitched slate roof. 1 attic dormer with modem casements to south. {1} {2}

Description and Sources

Description

Mid-C18 [marked on 1785 map]. South and west elevations painted brick. East elevation nodular flint with red brick dressings. Hipped tile roof, catslide behind. Red brick chimneys. 2 storeys and attics. Brick modillion eaves cornice. Ground floor has 1 modern segmental bow window with tripartite double-hung sash windows with glazing bars at east and west ends of south elevation, that at west end on consoles. These replace C18 shop windows. 1 double-hung sash window with glazing bars, and a section of plain brick stringcourse above voussoirs (cf No 2, Baker's Arms Hill). Doorway has flat hood with panelled soffit, taken on moulded consoles: modern door up 5 modern steps, flanked by modern iron railings. 5 double-hung sash windows with glazing bars on 1st floor. 2 attic dormers with casement windows, one with glazing bars. North elevation has a catslide roof with 1 tile-hung gable, but has otherwise been extensively modernised, as has the north wing. East elevation has 2 ranges, and west elevation 1, of double-hung sash windows with glazing bars. {1} {2}

Description and Sources

Description

Late C18. Red brick, with gauged brick voussoirs. Hipped slate roof. 2 storeys. Brick modillion eaves cornice. Parapet with ashlar coping, masking roof. 3 double-hung sash windows with glazing bars on 1st floor, 2 on ground floor flanking porch. 6-Panelled door (top 4 panels fielded) and oblong fanlight in panelled reveals with panelled soffit: original brass handle and keyhole. Porch has 3-centred arch with fluted keystone to front, and straight entablatures to sides, taken on 2 Tuscan pilasters, 1 Tuscan column, and 1 treetrunk. Incised roundels above capitals, paterae in spandrels of arch and moulded modillions in groups of 3 to deeply projecting cornice. 4 limestone steps to door, flanked by iron railings, east one incorporating boot-scraper. 2 double-hung sash windows with glazing bars to cellars, with iron grilles in front. {1} {2}

Description and Sources

Description

Late C18. Red brick. East elevation nodular flint with red brick dressings. Hipped tile roof. 3 storeys. Brick modillion eaves cornice. Ground floor has canted bay with 3 double-hung sash windows, and cornice over, and 1 6-panelled door in moulded frame with pediment supported by consoles, and elaborate mid-C19 knocker. Wooden beam flush with brickwork above all ground floor openings suggest that they might be later, as does a double-hung sash cellar window very deeply recessed under the canted bay. 2 flush-framed double-hung sash windows with. Glazing bars on 1st and 2nd floors. {1} {2}

Recorded on the National Heritage List for England as late 13th century, whereas the Greenback records the building as late 18th century which is more likely.

Description and Sources

Description

Early C19. Terraced cottages. Beach flint with brick dressings (Nos 56, 60 and 62 rendered, No 58 whitewashed). Pitched tile roofs (No 56's gambrel, and No 62's half-hipped) Brick chimneys. 2 storeys and attics. Brick modillion eaves cornice, No 62's rendered over. 1 range each of double-hung sash windows with glazing bars (except for No 58 which has plate glass window on ground floor and casement on 1st floor, and No 62 which has an oblong bay former shop window with glazing bars, surmounted by frieze and moulded cornice extending west as hood over door). Nos 56 and 53 have 1 planked door each with semi-circular fanlight over, and 1 ashlar step up. Nos 60 and 62 have partly glazed doors with oblong fanlights over, No 60's with glazing bars: No 62 has another door, segment-headed and partly glazed. Nos 56, 58 and 62 have an attic dormer each, No 62's with a double-hung sash window with glazing bars, others have casements with glazing bars. {1} {2}

Description and Sources

Description

Late C18. North elevation red brick. Other elevations beach flint with red brick dressings. Rubbed and gauged brick voussoirs. Pitched slate roof. Red brick chimneys. Red brick blocking courses to gable ends, with slate coping. 2 storeys and basements. Brick modillion eaves cornice. Ground floor symmetrical about 3-centred arch framing 2 planked doors, 1 with original latch and keyhole. Behind arch is a flight of 10 brick steps, divided down centre by wall of beach flint, and leading to 2 brick paved courtyards. Flanking arch are 2 double-hung sash windows with glazing bars, underneath which are 2 casement windows with glazing bars to basement. 1st floor has 5 double-hung sash windows with glazing bars. Limestone paving stones in front of 3 central bays only. {1} {2}

Description and Sources

Description

Late C18 [not on 1785 map]. Red brick with grey headers (Flemish bond). Nodular flint on west side. Hipped tile roof. Late C19 red brick chimney with much cornicing, 2 storeys, basement and attics. Brick modillion cornice. East elevation has 2 doorways, both with panelled Doric pilasters, fluted frieze, dentilled cornice, and false fanlight superimposed over frieze and tympanum area; 6-panelled doors set in plain reveals, south one with 1 brick step with ashlar, north one with lion's head knocker. Ground floor has 2 segment-headed double-hung sash windows with glazing bars, that to north flush framed. 1st floor has 3 flush-framed, segment headed double-hung sash windows with glazing bars. 2 late C19 attic dormers with projecting purlins, overhanging eaves, tiled gables, tile hung sides, and casement windows with glazing bars. South elevation has 1 range of segment-headed double-hung sash windows with glazing bars, 1 segment headed casement with glazing bars, and 1 segment-headed planked door to basement. {1} {2}

Description

Laze C19. Terraced houses. Architect J A Hansom. Red brick. Ashlar dressings, stringcourses and coping to gable parapet. Pitched tile roofs. Red brick chimneys with cornicing. 3 storeys. South elevation of each house has 1 planked oak door under 4-centred arch with chamfered jambs and voussoirs, above this are 2 square lights with diagonal lead glazing bars, also with chamfered surrounds. One 4-light mullion-and-transom window with casements and ornamental lead glazing bars, and chamfered surrounds on ground floor. A similar window of 4 lights, and 1 of 1 light on the 1st floor. Another of 3 ligts on the 2nd floor, set within a gable with a coped parapet and gablet set at right angles to it at its apex. 1 range of similar 2-light windows between projecting chimneys on west elevation. Between stringcourses at the south-west corner is an aedicule, the moulded base taken on acanthus corbelling, framed by colonnettes, with a battered canopy with finial and drop tracery, over niche containing statue of crowned male figure in mediaeval dress, a sword in right hand, and model of a Romanesque church in left hand (presumably a royal founder). {1} {2}

Description and Sources

Description

Mid C19. Stuccoed. Painted stone dressings. Hipped tile roof. Rendered chimney. 2 storeys and attics.
No 27 is The Swan Public House, of 5 window range. South range of 3 grouped double-hung sash windows with glazing bars on 1st floor, with plain reveals, a continuous moulded sill band supported on 4 consoles, and a vermiculated keystone in stucco over each light. Below this is another group of 3 double-hung sashes with glazing bars, all with semi-circular heads and a plain band round the embrasures: sill-band and keystones as in the windows above. All other ground and 1st floor windows are single-light double-hung sashes with glazing bars, plain reveals, moulded sills with 2 consoles, and vermiculated keystones. Doorway with horizontal rustication, cornice supported on extremely elaborate stucco consoles, deep plain reveals panelled double doors, oblong fanlight with glazing bars. Moulded stringcourse above ground floor. Both No 27 and No 29 share 3 attic dormers with gables, tile-hung fronts, and double-hung sashes with glazing bars. South façade of No 27 has one 6-panelled door with oblong fanlight with glazing bars in plain reveal; vermiculated keystone over. 2 ranges of double-hung sashes with glazing bars; vermiculated keystones, and moulded sills on 2 consoles. 1 storey extension to west: pitched roof with gable at west end. 1 planked double door. 1 plain door with oblong fanlight; 2 double-hung sash windows with no glazing bars, plain keystones, and moulded sills on 2 consoles. West end of extension to No 27. Beach flint, clunch and random Pulborough stone. Red brick chaining and 2 stringcourses. Rounded corner to south. No openings. {1} {2}

Description and Sources

Description

C16. Timber-framed. C18 painted brick frontage on south (Tarrant Street) side. Late C19 brick frontage on east (High Street) side. West (rear) elevation partly tile-hung. Hipped and gabled tile roof. Red and grey brick chimney with louvre instead of pots. 2 storeys and attics. South elevation has brick modillion eaves cornice and 2 windows on each floor. 1 on ground floor has tripartite wooden frame, centre light with vertical iron bars set diagonally, flanking ligts with lead glazing bars. 1 attic dormer, gabled with 3 plain lights and brick nogging in the gable end. East elevation has, on ground floor, 3 bay windows with glazing bars, and moulded brick decorative panels set into their plinths; 1 modern plate glass door, 1 double hung sash window win glazing bars and a gauged brick apron with ogival lower edge, and 6-panelled door in plain surround, the 2 latter grouped together under a moulded brick cornice. 3 double-hung sash windows with glazing bars on 1st floor. West elevation has 1 largely demolished wing, and 5 double-hung sash windows with glazing bars. Interior: on ground floor, 1 room with a mid or late Cl6 plaster ceiling. Slender curving ribs, which intersect to form apple-shaped motifs, enclosing oak trees (with acorns) in low relief. Smaller intervening spaces filled with 2 different types of rosette, 7 larger ones filled with Tudor roses surrounded by laurel wreaths and 2 of the larger ones filled with lions rampant. Mid or late C16 panelling, mostly concealed by hardboard. The small amount which is exposed appears to be later than the ceiling, since line of ceiling cornice cuts through middle of each panel. Identical to panelling in upper room (see below); but includes 2 fluted and stopped pilasters, with incised lines between each flute. Upper room had plaster ceiling which has now collapsed (traces of plaster and of lathes on ceiling joists), it may possibly have overlapped the panelling, and thus have been younger. Mid or late C16 panelling. Oak, painted grey. Small panels of regular size throughout, approximately 1 ft high and 9 ins broad. Stiles moulded on the solid, identical throughout. Muntins interrupted by the rails. Mouldings mitred on underside of rails only, and not on upperside. Rails are in every case not moulded on the upperside, but have plain chamfer. Pilasters flanking chimney piece have been removed, but their plinths remain, these are approximately 1 ft 6 ins high with recessed panels (without fielding, strapwork or any other decoration); profiles of pilasters (unpainted) show them to have been approximately 7 ft high, dispropor- tionately narrow, with an entasis, slightly too wide "Tuscan" capitals, and wide bases. Fluted frieze motif above door and chimney piece. Panelling is not completely regular, and appears to have been fitted as best possible around the 2 double-hung sash windows. Mid C19 cast-iron rococo fireplace. Another small upper room has early C18 fielded panelling up to dado level, and doorcase with moulded surround and segmental fanlight. Staircase is early C18, with a plain rail and turned balusters. {1} {2}

Description and Sources

Description

1868 (rainwater head dated). Terraced estate cottage. Red brick, with some grey headers. Pulborough stone dressings. Pitched slate roof, with grey tile bonnets, and projecting wooden eaves. Wooden bargeboards to all gables, the end ones with elaborate drop tracery and decorated finials. Iron drainpipes and rainwater heads. Red brick chimney with Pulborough stone quoins. 2 storeys and attics, 1 window range with projecting porch. Porch has single light casement windows with no glazing bars on south elevation, and door in the side elevation. Porch has pitched roof with projecting eaves. All other windows have casements with glazing bars. Attic dormer is gabled , has slate-hung sides, and weatherboarded south elevation; dormer windows are all casement. Continuous Pulborough stone sill courses to both floors. Brick retaining wall to south of cottage, interrupted by brick steps up, and surmounted by a brick terrace. {1} {2}

Description and Sources

Description

1868 (rainwater head dated). Terraced estate cottage. Red brick, with some grey headers. Pulborough stone dressings. Pitched slate roof, with grey tile bonnets, and projecting wooden eaves. Wooden bargeboards to all gables, the end ones with elaborate drop tracery and decorated finials. Iron drainpipes and rainwater heads. Red brick chimney with Pulborough stone quoins. 2 storeys and attics, 1 window range with projecting porch. Porch has single light casement windows with no glazing bars on south elevation, and door in the side elevation. Porch has pitched roof with projecting eaves. All other windows have casements with glazing bars. Attic dormer is gabled , (bargeboards of No 12 have drop tracery), has slate-hung sides, and weatherboarded south elevation; dormer windows are all casement. Continuous Pulborough stone sill courses to both floors. Brick retaining wall to south of cottage, interrupted by brick steps up, and surmounted by a brick

Description and Sources

Description

1868 (rainwater head dated). Terraced estate cottage. Red brick, with some grey headers. Pulborough stone dressings. Pitched slate roof, with grey tile bonnets, and projecting wooden eaves. Wooden bargeboards to all gables, the end ones with elaborate drop tracery and decorated finials. Iron drainpipes and rainwater heads. Red brick chimney with Pulborough stone quoins. 2 storeys and attics, 1 window range with projecting porch. Porch has single light casement windows with no glazing bars on south elevation, and door in the side elevation. Porch has pitched roof with projecting eaves. All other windows have casements with glazing bars. Attic dormer is gabled, has slate-hung sides, and weatherboarded south elevation; dormer windows are all casement. Continuous Pulborough stone sill courses to both floors. No 24 has 1 storey extension to north facing Mount Pleasant, Beach flint. Red brick dressings. Pitched slate roof. 1 door. 1 window (modern casement with glazing bars). Brick retaining wall to south of cottage, interrupted by brick steps up, and surmounted by a brick

Description and Sources

Description

Early C19, Terraced cottages. Nodular flint with galleting. Yellow brick dressings, and giant pilasters framing each pair of cottages. Rear elevation and south end in beach flint with red brick dressings. Hipped slate roof. Yellow and red brick chimneys. 2 storeys. Moulded brick cornice (cyma recta). 1 window range each. All segment-headed double-hung sashes with glazing bars. Ground floor windows of No 18 are flush-framed, and are paired under segmental brick relieving arches, over which there are blind segment- headed window recesses, 1 segment-headed doorway: 6-panelled door. {1} {2}

- Main Building Material: SUSSEX STONE

Description and Sources

Description

1890 [Dated rainwater head]. Red brick, with diaper pattern over entrance to No 20. Pulborough stone quoins, dressings, stringcourses, the entire ground floor of No 18, and the flushwork in gable over entrance to No 20. Tile roof. Red brick chimneys with grouped stacks, panelled sides and cornicing. No 18 and 1 bay of No 20 have 3 storeys: rest of No 20 4 storeys. 6 bays, each surmounted by gable with Pulborough coping. Canted bay shopfronts on ground floor, flanked by doorways with "Caernarvon" arches. Mullion and transom windows above. {1} {2}

Description and Sources

Description

Mid C18. Former George Inn. Red brick, with chaining of grey headers between window ranges. Rusticated quoins of brick up to cornice level. Moulded brick cornice above 1st floor. Rubbed brick voussoirs on 1st floor. Pitched tile roof, masked by parapet with ashlar coping. Red brick chimneys. 3 storeys. 5 bays, of which centre 3 break forward. 2 flanking bays have

ARUN DISTRICT COUNCIL AB/36/18/PL

Venetian windows with double hung sashes and glazing bars on 1st floor. All other windows are double-hung sashes with glazing bars, those on 2nd floor segment-headed, although 2 on 2nd floor have been filled in. All 3 houses have shopfronts inserted on ground floor. No 30 has a segmental bay on either side of the door, and dentilled cornice above glazed double doorway with semi-circular fanlight. Moulded entablature over all, with fret pattern on frieze. In the C18 The George Inn belonged to the Duke of Norfolk and was the political centre of the local Whig party, until superseded by the Norfolk Arms in 1783-5. {1} {2}

Description and Sources

Description

Mid C19. Terraced house. Ground floor red brick with 2 grey brick stringcourses, and grey bricks in the pointed relieving arches over the windows. Pulborough stone dressings and kneelers. 1st floor timber-framed with ornamental bracing and rendered nogging. Pitched tile roof. Red brick chimneys with cornicing, grey brick string courses and battered lower courses of Pulborough stone. Red brick parapet to west gable of roof, with Pulborough stone coping and kneelers. 2 storeys. Plinth with upper courses battered. 1 planked cellar door and 1 cellar window on south side. All window and door reveals partly chamfered, to simulate "Caernarvon" arches. Ground floor has 2 windows and 1 door with 2 lights over it on east (High Street) side, 3 windows and 1 door to south (Maltravers Street) side. 1st floor is jettied along whole of south side, and north half of east side. Rafters have concave moulding at ends. Jetty supported by 3 wooden brackets supported on stone corbels along south side and 1 on east side. 1st floor has 3 windows on east side, with hipped gable above the most northerly. 2 windows on south side, one with hipped gable over, and other with pitched gable over. All gables have projecting purlins with moulded ends, and chamfered bargeboards. All windows mullion and transom, except for central window on 1st floor of east side, and have casements with diagonal iron glazing bars. Original iron drainpipes, brass door handles, and bell pulls. {1} {2}

Main Building Material	RENDER

Description and Sources

Description

Early C19, Terraced house (together with Nos 17, 19 and 21 Maltravers Street). Red brick north elevation. West elevation rendered. Hipped slate roof. Red brick chimneys. 3 storeys. Brick modillion eaves cornice. North elevation has 1 range of double-hung sash windows with glazing bars on 1st and 2nd floors; and on ground floor 1 segmental bay with 3 double-hung sash windows with glazing bars, and moulded cornice with consoles. West elevation has 1 round arched double-hung sash window with glazing bars on 1st floor. 1 horizontally sliding sash window with glazing bars on ground floor. One 6-panelled door (2 fielded, 2 moulded), partly glazed, in moulded frame with plain reveals, dentilled pediment taken on consoles, and 3 limestone steps up, flanked by fluted iron railings with acanthus capitals. 1-storey extension to south. Rendered. Brick modillion cornice. 1 window with horizontally sliding sash, flanked by 4-panelled door (top 2 panels glazed), and both surmounted by shallow hood on 3 consoles, the door approached by 3 brick steps with iron railings. {1} {2}

Description and Sources

Description

1899-1900. Architects Wheeler and Lodge of Horsham and London. Newspaper office. Ashlar ground floor. Brick 1st floor. Applied timber and pebbledash 2nd floor. Pitched tile roof. 6 hexagonal red brick chimneys linked by an elaborate cornice. 3 storeys and attics. Groundfloor glazed with moulded wooden mullions with grotesque label stops, moulded wooden segment-arched transoms, and lead glazing bars. 2 12-panelled doors, central one with upper 6 panels glazed, both with dentilled cornices and brass art nouveau handles . Projecting ashlar cornice with strapwork cartouche, giving date of establishment (1853). 1st floor has 2 oblong bays with mullion and transom windows, casements with lead glazing bars, and a dentilled cornice. 2nd floor jettied on elaborate consoles (diamond facets, strapwork, triglyphs and mutules all featured). Close-spaced studs, with elaborate terms at either end, carrying 2 more consoles, identical to the others. 3 projecting bays, central one segmental, flanking 2 canted, and taken on consoles, all with lead glazing bars and dentilled cornices. Attic storey jettied; embattled bressummer. Close studded, with central term, strapwork bargeboard and baluster finial. On ground floor is remarkable late C19 office interior. Front and back walls glazed, site walls covered in glazed tiles. High desks with embattled parapets all round, and elaborate brass racks and desks for keeping ledgers. {1} {2}

Terraced Cottage dating to 1821.

Monument Types and Dates

BAY WINDOW (Constructed, (at some time) Post Medieval - 1821 AD)
- Component Sub-Classifications: BRACKET
- Component Sub-Classifications: GLAZING BAR

CORNICE (Constructed, (at some time) Post Medieval - 1821 AD)
- Component Sub-Classifications: EAVE
- Component Sub-Classifications: MODILLION

DOORWAY (Constructed, (at some time) Post Medieval - 1821 AD)

EAVE (Constructed, (at some time) Post Medieval - 1821 AD)

GUTTER (Constructed, (at some time) Post Medieval - 1821 AD)
- Component Sub-Classifications: BRACKET

PEDIMENT (Constructed, (at some time) Post Medieval - 1821 AD)
- Component Sub-Classifications: FRIEZE
- Component Sub-Classifications: PILASTER

SASH WINDOW (Constructed, (at some time) Post Medieval - 1821 AD)
- Component Sub-Classifications: GLAZING BAR

Shopfront (Constructed, (at some time) Post Medieval - 1821 AD)
- Covering Building Material: SLATE
- Evidence: EXTANT BUILDING
- Main Building Material: BRICK
- Main Building Material: FLINT
- Main Building Material: SUSSEX STONE

TERRACED HOUSE (Built, (at some time) Post Medieval - 1821 AD)
- Covering Building Material: SLATE
- Evidence: EXTANT BUILDING
- Main Building Material: BRICK
- Main Building Material: FLINT
- Main Building Material: SUSSEX STONE

WINDOW (Constructed, (at some time) Post Medieval - 1821 AD)
- Component Sub-Classifications: GLAZING BAR

PANELLED DOOR (Constructed, (between) Modern - 1901 AD to 2050 AD)

Description and Sources

ARUN DISTRICT COUNCIL AB/36/18/PL

Description

1821 (date panel). Terraced cottages. Purbeck stone with yellow brick dressings. South elevation beach flint with red brick dressings. Hipped slate roofs with overhanging eaves. 2 storeys. Yellow brick modillion eaves cornice. 1 window range each of segment-headed, flush framed double-hung sashes with glazing bars. No 7 has 2 window ranges, and a shop front on the ground floor of each, that on south side is flush with wall, has incised line decoration on the frame, and glazing bars, that on the north side is a bay supported on wooden brackets, and has glazing bars. 1 door each, grouped in pairs, except for No 7. All 6-panelled, with some glazing inserted, except for No 7 which are modern. Doorway in frame with pediments over; incised line decoration on pilasters and frieze. No 7 have gutters supported on iron brackets. {1} {2}

Description and Sources

Description

Early C19. Terraced cottages. South elevation stuccoed: remainder nodular flint with red brick dressings. Slate roofs (Nos 74-8 hipped: Nos 80-4 pitched, and steeper). Late C19 red brick chimneys with much cornicing. South elevation has 2 storeys and basement. Stucco stringcourse above ground floor, and stucco cornice to eaves with parapet. Pilasters between each house and at ends. 1 window range each, all double-hung sash windows with glazing bars in moulded stucco surrounds. 1 door each, in plain reveals, No74 modern. Area with basement doors, and late C19 iron railings with ogival finials in front of whole range. Rear elevation has 3 storeys, with a brick modillion eaves cornice. 1 range each of segment-headed double-hung sash windows with glazing bars (ground and 1st floor of No 74 has 1 continuous modern window strip). 1 planked door each. {1} {2}

Description and Sources

Description

Early C19. Terraced cottages. South elevation stuccoed: remainder nodular flint with red brick dressings. Slate roofs (Nos 74-8 hipped: Nos 80-4 pitched, and steeper). Late C19 red brick chimneys with much cornicing. South elevation has 2 storeys and basement. Stucco stringcourse above ground floor, and stucco cornice to eaves with parapet. Pilasters between each house and at ends. 1 window range each, all double-hung sash windows with glazing bars in moulded stucco surrounds. 1 door each, in plain reveals, No 82 modern. Area with basement doors, and late C19 iron railings with ogival finials in front of whole range. Rear elevation has 3 storeys, with a brick modillion eaves cornice. 1 range each of segment-headed double-hung sash windows with glazing bars. 1 planked door each. {1} {2}

Description and Sources

Description

Methods of poor relief used in Arundel in the 17th and 18th centuries were apprenticing, usually to Arundel masters, weekly pay, boarding out, and the provision of clothing and medical care. Between the mid 17th century and the early 19th the overseers also distributed endowed charitable doles. In the 18th century rent, fuel, and food and drink were provided, and a payment was made for schooling in 1772. There was a poorhouse in the north-west part of the town by 1682, when a room with a loft over it was to be built presumably nearby; its site seems to have been on the east side of Park Place, where a possibly 17th-century range survives behind the mid 19th-century workhouse. Expenditure on linen, thread, yarn, and knitting

ARUN DISTRICT COUNCIL AB/36/18/PL

needles in 1678 and later was presumably for work to be done at the poorhouse, and the 'town house' where poor children and apparently widows lived in 1713 was probably the same building. In 1779–80 a new 'workhouse' was built in its garden. Arundel was a single parish under Gilbert's Act, 1782. The appointment of an assistant overseer by c. 1814 had greatly reduced the rise of poor-law expenditure by 1834. Another workhouse, of flint with brick dressings, was built in 1831 on the east side of Park Place, evidently on the site of the earlier building. Clothing was supplied to inmates in the 1830s, when weekly pay was also given. In 1832 between four and twenty labourers a week were out of work in winter and none in summer. Arundel remained separate for poor-law purposes after 1835, the workhouse having 41 inhabitants in 1841, 33 inmates in 1851, and 15 in 1861. A standing committee for the relief of the necessitous poor existed between 1838 and 1842, and included the mayor, the churchwardens, and religious leaders; money was raised from subscriptions and the holding of concerts, and the committee distributed bread weekly in winter at a reduced price. In 1869 Arundel was added to East Preston union, which conveyed the town workhouse to the duke of Norfolk in 1873. During the earlier 20th century it was a club house and in 1985–6 it was converted into flats. In 1871 the former workhouse was used as a temporary smallpox hospital. {1}

Arundel, Sussex:
Up to 1834
Arundel had a poorhouse from at least 1682, probably sited on the east side of Park Place (VCH, 1997). In 1713 it was recorded as housing poor children and widows. A new workhouse was built in its garden in 1779-80.
Arundel was incorporated as a Gilbert Parish sometime after 1782. In 1831, it built a workhouse and the same site at the southern end of what had become Poorhouse Hill, now Mount Pleasant, in Arundel.
After 1834
Arundel's status as a Gilbert Parish exempted it from many of the provisions of the 1834 Poor Law Amendment Act. The workhouse continued in operation, having 41 residents in 1841, 33 in 1851, and 15 in 1861. The Parish continued in operation until 1869 when all remaining Gilbert Unions and Parishes were abolished. Arundel then became part of the East Preston Poor Law Union.
In 1871, the former Arundel workhouse used as a temporary smallpox hospital. In the earlier part of the twentieth century, the building was used as a club house and in 1985-6 it was converted into flats. {2}

1851 (dated). Formerly the poor house. Nodular flint. Red brick dressings, with some grey headers in window jambs. Rubbed brick voussoirs. Ashlar sills. Late C19 brick chimneys. Hipped slate roof in front, pitched tile roof behind (probably earlier). 3 storeys. Brick string courses between. Brick modillion cornice. 5 bays, central one with planked door now masked by modern porch. All windows segment-headed, double-hung sashes with glazing bars, except for central window of 1st floor which is modern. 4 windows on 2nd floor are blocked. Internally joists run unsupported from wall to wall, and are apparently cased in wooden planks. It is not clear what this casing encloses; if the joists are iron, and if they date from 1831, the building is of major importance. 2 storey brick extension to north. Red brick. Hipped slate roof. 1 planked door with 1 double-hung sash window with glazing bars above. Outhouse (formerly bath house) to south-west, set at right angles to front. Nodular flint, red brick dressings, ashlar sills and keystones. Hipped and gabled tile roof. Modillion cornice of bricks set diagonally to form zig-zag pattern. 1 storey with attics, 1 planked door. 2 segment-headed double-hung sash windows with glazing bars. 2 large gables, each with 1 narrow round-arched casement window. Courtyard bounded to north by nodular flint retaining wall with red brick dressings; to west by iron railings with prominent ornamental finials. (1 missing). No gates. Railings set on nodular flint retaining wall with brick chaining and ashlar coping, which, together with the retaining wall of the outhouse, borders the east side of Mount Pleasant. {3} {4}

A workhouse built in 1831 and altered in the early 20th century. {5}

Description and Sources

Description

Late C18 [not marked on 1785 map]. Red brick. South elevation rendered. Hipped tile roof. Red and grey brick chimneys. 2 storeys and attics. Plain stringcourse at eaves level, with parapet masking roof. South elevation has 3 double-hung sash windows with glazing bars on 1st floor, and 2 on ground floor, flanking porch with ogival lead roof taken on 3-centred arch with wooden keystone to front, and straight entablatures to sides, supported by Tuscan columns and pilasters. Attic dormers have casements with glazing bars. East elevation has eaves cornice with cyma reversa modillions, 1 range of blocked windows, 2 double-hung sash windows with glazing bars on 1st floor, 1 triple-hung sash window with no glazing bars on ground floor, and 1 6-panelled door, partly glazed, in moulded frame with 5 brick steps (3 treads of Bognor Rock, 1 of limestone) arched over gutter. 1 planked cellar door with segmental head framed by semi-circular relieving arch of grey headers. Terraced garden to south, flanked by brick retaining wall with ramping top. Planked door in east wall, leading to vaulted cellar underneath terrace.{1} {2}

LANCET WINDOW (Constructed, (between) Post Medieval - 1833 AD to 1866 AD)

Component Sub-Classifications	CRENELLATION
Component Sub-Classifications	GLAZING BAR

Description and Sources

Description

Mid C19. [Mill Road was laid out circa 1850 (Map in Arundel Castle Archives). Before then the Bridge Gates would have been outside the Castle Grounds, separated by Mill Lane, which was closed when Mill Road was built]. Knapped flint. Pulborough stone lower courses, quoins, dressings and battered coping. Pulborough stone chimneys. 2 circular bastions with battered lower courses and crenellated parapets flank main gateway. East bastion 1 storey: remainder 2 storeys. East bastion has 3 pointed lancets with chamfered embrasures and diagonal lead glazing bars and 1 blind arrow slit in east re-entrant angle. Extended to east with no windows apart from 1 oblong lancet with chamfered embrasures and diagonal lead glazing bars in east elevation of extruded corner. Octagonal chimney on square base with original spurs, and battered upper courses. West bastion has 3 pointed lancets with chamfered embrasures and diagonal lead glazing bars on ground floor, and 2 on 1st floor. Extended to west, with 5 oblong lancets with chamfered embrasures and diagonal lead glazing bars on ground floor, and 3 on 1st floor. Parapet crow-stepped down to level of adjoining wall at west end. Stringcourse above 1st floor. 2 oblong chimneys with battered upper courses. Main gateway has 1 planked double door with ornamental iron hinges, in pointed archway with 3 chimneys and hood mould, continued west as stringcourse above 1 planked door with ornamental iron hinges in pointed arch with chamfered embrasures and hoodmould. 2 plain square ashlar panels above doors, and 1 oblong lancet with chamfered embrasures and diagonal lead glazing bars above smaller door. 4 arrow slits in plain parapet. {1} {2}

Evidence	EXTANT BUILDING
Main Building Material	ASHLAR
Main Building Material	CLUNCH
Main Building Material	FLINT
Main Building Material	SANDSTONE
Main Building Material	SUSSEX STONE

Description and Sources

Description

1380. Rebuilt in early C19 [not marked on 1785 map, therefore presumably ruinous at this date. Appears in present form on engraving by T Allom, d.1842]. Former College of Holy Trinity, attached to, and contemporary with the Fitzalan Chapel. Dissolved at Reformation, abandoned, then re-established in C19 as convent of Servite Nuns . Now an orphanage. Nodular flint. Pulborough stone dressings in mediaeval parts, and some early C19 parts. Ashlar dressings elsewhere. Some random Pulborough stone, upper greesand, and clunch in mediaeval parts. 2 storeys. Crenellated parapet (machicolated on west elevation of south range). 2 ranges, set at 90 degrees, and 1 C14 wall to another, non-existent range, thus forming 3 sides of a courtyard of which the 4th is the south wall of the Fitzalan Chapel. South elevation of south range has low tower at west end. 13 ranges of 2-light, cusped, pointed arched casement windows with diagonal lead glazing bars, set in oblong surrounds with moulded reveals. 2 doors with pointed arched heads set in oblong panels with moulded reveals, and with steps up flanked by iron railings with urn finials. 2 buttresses. West elevation of south range has 1 range of 4-light, cusped pointed arched windows set in square recessed panels with moulded reveals, and 4 quatrefoil panels between storeys. 1 door. C14 wall is pierced by unglazed 2-light windows with cusped trefoil heads, and embrasures splayed internally. {1} {2}

Description and Sources

Description

Late C18 [not on 1785 map]. Red brick with grey headers (Flemish bond). Hipped slate roof. 2 red brick chimneys attached to west wall meet over pointed arch. 3 storeys and semi-basement with area. 2 ranges of double hung sash windows with glazing bars on 1st and 2nd floors. Canted bay window on ground floor with 3 double-hung sashes with glazing bars. 3 ashlar steps up to porch with Tuscan columns supporting 3-centred arches with fluted keystone to front, and some fluting in spandrels: dentilled pediment over. 6-panelled door, 2 panels fielded, 2 glazed, and semi-circular fanlight set in panelled reveals. Art nouveau iron railings to 1st floor windows. Iron railings to area with fluted balusters and necking, and ornamental finials. Area has 7 ashlar steps down to semi-basement, and 5 more brick steps down to cellar. 1 semi-basement door under quadrant vault carrying front door steps, and 1 double-hung sash window with glazing bars. Coachhouse. Red brick. Pitched slate roof with sprocketing. 2 storeys. Brick modillion eaves cornice. 2 double-hung sash windows with glazing bars on 1st floor. 2 sets of double doors, 1 planked, 1 segment-headed and with chamfered jambs. {1} {2}

Greenhouses to Arundel Castle, Arundel, first shown on a drawing of 1854.

Monument Types and Dates

GLASSHOUSE (Built, (Circa) Post Medieval - 1854 AD)

Evidence	EXTANT BUILDING
Main Building Material	BRICK
Main Building Material	GLASS
Main Building Material	IRON

Description and Sources

Description

Greenhouses. First shown on a drawing of 1854 and by the firm of Jones and Clark, later Henry Hope Ltd. Lean-to type with stock brick rear wall and plinth to front in flemish bond with stone coping, wrought iron frames and glass panes. The structure is 28 bays long divided into two sections. Front has cambered arches mainly buried under the soil, probably for planting vines outside, and sloping roof with alternate bays opening. Most of the original glazing survives. Each side and centre have Gothick arched opening with centre and left side retaining half-glazed door. Interior has ventilation bricks and elaborate system of pulleys and brackets for training vines. Originally northern range wired for vines and southern range wired for peaches. [See "Order Book of Henry Hope"-(formerly Clark and Hope) Volume I.] {1} {2}

Description and Sources

Description

Early C19. Terraced house. Rendered; ground floor with horizontal rustication. 3 storeys and basement with area. Plain stringcourse above ground floor. Eaves cornice above No 47 only, with blocking course above whole range. Plain giant pilasters every other bay. Ranges of double-hung sash windows with glazing bars in moulded surrounds. Door, with 10 moulded and fielded panels, oblong fanlights and early C19 knockers. Rear (south) elevation has verandah to 1st floor with iron balustrade, slender wooden columns and cornice taken on consoles. Iron railings with spear finials in front of area to north. Garden wall on west side, flanking King's Arms Hill: beach flint, with red brick stringcourse, and rendered brick coping. {1} {2}

MWS11411	Water Pipe Reconfiguration Works, Arundel Castle, Arundel: Archaeological Watching Brief	Negative Evidence

An archaeological watching brief was undertaken at Arundel Castle to record any archaeological deposits in the area that was to be affected by the works to reconfigure existing water mains at Arundel Castle. No archaeological deposits were identified and no artefacts were recovered.

Monument Types and Dates

Negative Evidence (Built, Unknown date)
Evidence Excavation/Evaluation

Description and Sources

Description

An archaeological watching brief was undertaken at Arundel Castle to record any archaeological deposits in the area that was to be affected by the works to reconfigure existing water mains at Arundel Castle.
A narrow trench 4m x 0.75m was cut across the line of the existing pipes to locate those which needed to be reconfigured. The trench revealed a number of water pipes with associated stop cocks and covers. They had been inserted into what appeared to be back filling or make-up materials which contained a large amount of brick and other building rubble however no archaeological deposits were identified and no artefacts were recovered. It was suggested that the site had been subject to past landscaping. {1}

Description and Sources

Description

Furniture repository, later offices and restaurant. C1880. Red brick with contrasting yellow/red brick decorative courses and segmental arches and surrounds to windows. Brick modillion eaves cornice. Slate roof. Brick chimneys. Three storeys with 2

ARUN DISTRICT COUNCIL AB/36/18/PL

storey lean-to section at east end. Double gabled roof. South elevation to street: ground floor has arcaded front with five archways, the central one being taller with a stone keystone to its arch. Behind these is a range of fixed windows and a central glazed double door (now blocked). At the west end a larger arch with stone keystone has a double wooden garage door. The lean-to section at the east end has been altered (c1991) to an arched entrance to match that at the west end, leading to a fight of brick steps. First floor: 6 double-hung sash windows with glazing bars, 1 small window in lean-to section (replaced double-hung sash window in 1991). Second floor: 6 double-hung sash windows with glazing bars. East elevation: second floor: 3 double-hung sash windows with glazing bars and painted sign. West elevation: identical to east. {1} {2} {3}

Description and Sources

Description

House and shop. Late C18 rebuild of a lower late C16 or early C17 house. Red brick. Pitched slate roof with lead bonnets. 3 storeys. Eaves cornice with cyma-recta-shaped modillions of brick. 4 ranges of double-hung sashes, with glazing bars on 1st and 2nd floors. Ground floor has 2 late C19 shop windows, 1 plate glass with glazing bars in the upper section: the other a canted bay "Ipswich" window with moulded mullions, glazing bars and cornice. Doorway with unfluted Roman Doric 3/4 columns, dentilled pediment, semi-circular fanlight, and panelled reveals surrounding door with 2 fielded panels, top half glazed with glazing bars and original brass letter box. 2 ashlar steps up. Early C19 iron railings to cellar doors in front and behind, that in front with remarkable "Egyptian" finial. North east corner has a two storey wall of dressed flint below later brickwork with blocked first floor two-light sandstone mullioned window of late C16 or early C17 date. {1} {2}

Description and Sources

Description

House and restaurant. Early C19 with some late C20 refenestration. Stuccoed front to high Street, red brick to Tarrant Street. Hipped slate roof. Red brick chimneys. 3 storeys and attics. Moulded stucco eaves cornice on east elevation. Brick modillion eaves cornice on north elevation. East elevation has mid C19 shopfront on ground floor, with 2 doors placed diagonally in central recessed porch; plate glass with rounded shoulders and moulding in spandrels; eclectic capitals at corners. 4 vertically-hung sashes with glazing bars, 6-pane to second floor and 12-pane to first floor. Lattice dormer with double-hung sashes and no glazing bars. North elevation to Tarrant Street has four replacement purpose-made timber vertically sliding sashes. Mid C19 doorway with Tuscan pilasters, pediment , deep reveals with moulding of oval section, a 6-panelled door, a knocker with hand and laurel wreath motif, and a picturesque letter-box. West elevation has round-headed staircase window with double-hung sashes and intersecting Gothick glazing bars. {1} {2}

Description and Sources

Description

C15 or C16. Formerly Crown Commercial Inn. Timber-framed, Refronted in C18 with brick, painted white. Partially slate-hung behind. Hipped tile roof, Red brick chimneys, 3 storeys. Brick modillion cornice. Parapet. 6 bays, with 3 more openings on ground floor, an open archway to Crown Yard, with plain chamfered bressummer. Nos 37 have 1 doorway with gabled hood over, supported on consoles, moulded embrassures and panelled reveals. On north side of door to No 37 are 3-light canted bays on both ground and 1st floors: plate glass on ground floor level, double-hung sashes with glazing bars at 1st floor level. Remaining windows on 1st and 2nd floors are double-hung sashes with glazing bars. The 2 windows at the north end of the 2nd floor are blocked. No 37 has a 2-storey extension to west. Early C19. Painted brick. Pitched tile roof. The 1st floor of the south elevation has a continuous band of mullion and transom industrial windws. The ground floor has 1 segment-headed planked door, and 1 segment-headed casement window. At west end there is a modern balcony to 1st floor. In the C18 the Crown Inn belonged to the Shelleys of Michelgrove, and was the political centre of the Tory party in Arundel. {1} {2}

Description and Sources

Description

C15 or C16. Formerly Crown Commercial Inn. Timber-framed, Refronted in C18 with brick, painted white. Partially slate-hung behind. Hipped tile roof, Red brick chimneys, 3 storeys. Brick modillion cornice. Parapet. 6 bays, with 3 more openings on ground floor, an open archway to Crown Yard, with plain chamfered bressummer. No 39 has a modern doorway. 1 doorway with gabled hood over, supported on consoles, moulded embrassures and panelled reveals. On north side of door to No 39 are 3-light canted bays on both ground and 1st floors: plate glass on ground floor level, double-hung sashes with glazing bars at 1st floor level. Remaining windows on 1st and 2nd floors are double-hung sashes with glazing bars. The 2 windows at the north end of the 2nd floor are blocked. In the C18 the Crown Inn belonged to the Shelleys of Michelgrove, and was the political centre of the Tory party in Arundel. {1} {2}

Description and Sources

Description

Across North end. 6: octagonal, tapering cast iron posts with shallow conical caps, and "C and H Tickell, Southampton" in relief on one side, "Arundel Corporation 1819" on the other. Metal rings on the caps suggest these were originally in High Street, and used for attaching beasts during markets. {1} {2}

Description and Sources

Description

Late C18. [marked on 1735 map]. Red brick. Centre bay of North front in grey brick headers with red brick dressings. Hipped

ARUN DISTRICT COUNCIL AB/36/18/PL

slate roof. Red brick chimneys. 2 storeys. Plain brick stringcourse. Brick modillion eaves cornice, 3 bays to north, of which central one breaks forward and is crowned by a modillioned pediment. All windows on this elevation are double-hung sashes with glazing bars. Doorway has Tuscan pilasters with pronounced entasis, and a dentilled pediment above a pulvinated frieze. Door with 6 fielded panels, and early C19 knocker, in panelled reveals. 5 ranges of double hung sash windows with glazing bars in east elevation, except for 2 south ranges whose windows are blocked with grey headers. 2 segment-headed cellar windows with glazing bars and 3 cellar windows blocked with grey headers. South elevation has 2 ranges of double-hung sash windows on ground floor and 1st floor, but basement openings are modern. {1} {2}

Description and Sources

Description

Early C19. Red brick with grey headers (Flemish bond). North and west elevations nodular flint with red brick dressings. Hipped slate roof. Red brick chimneys. 3 storeys. Brick modillion eaves cornice. 2 double-hung sash windows with glazing bars on 2nd floor, 1 on 1st floor. Canted bay to ground floor and 1st floor with cellar door below ground floor window, and planked wooden section between ground and 1st floor windows, 3 windows on each floor, all double-hung sashes with glazing bars; cornice above with scalloped bargeboard. Door with 4 moulded panels and oblong fanlight in plain reveals framed by pilasters with elongated, fluted capitals and cornice above. 1-storey extension to west with lean-to roof; red brick front and west elevation of nodular flint with red brick dressings. Ramping parapet with ashlar coping on south elevation. Brick modillion eaves cornice on west elevation. South elevation has 6-Panelled door in plain reveals surrounded by moulded frame, with cornice over and 2 wooden steps up. This and door in main block are connected by a balcony with brick retaining wall, ashlar coping and iron railings with 3 ball finials, approached by a curving flight of 6 limestone steps. {1} {2}

- Main Building Material: SUSSEX STONE

Description and Sources

Description

Mediaeval. Rebuilt in early or mid-C19. (Watercolour of 1780 [Sussex Archaeological Society], and print of 1792, signed "TS" [NMR] show it before rebuilding, the side bays intact, but the arch collapsed). Former town gate (becoming redundant on diversion of London Road). Dressed and knapped flint, with Pulborough stone dressings. 3 storeys. Stringcourse at eaves level, and crenellated parapet. 3 bays, central bay flanked by buttresses, which take machicolated 2nd storey. Flanking bays have rectangular windows with roll-moulded surrounds on ground and 1st floors, pointed lancets with roll-moulding surrounds on 2nd floor. Central bay has 1 4-centred arch with chamfered and moulded embrasures through ground and 1st storeys, and 3 slits on 2nd storey. {1} {2}

Description and Sources

Description

Mid-C19. Main block beach flint with red brick dressings and stringcourses. Pitched tile roof. 3 storeys and maltings in attics. East elevation has 2 ranges of casements with glazing bars, and planked loading door on 2nd floor. South elevation completely obscured by unlistable rendered addition. West elevation largely obscured by outbuildings, but 2 segment-headed windows are visible on 2nd floor. Louvred clerestory with hipped tile roof on crest of roof. Gabled dormers to east and west, with pitched tile roofs, tile-hung sides, and partly louvred, partly glazed fronts. {1} {2}

Description and Sources

Description

Early C19. [Not marked on 1785 map, but in existence by 1823 when it features in a dated drawing]. Former Vicarage, now 2 terraced houses. Yellow brick. Ashlar dressings, and ashlar tower at east end. 3 storeys and basement with area. 9 ranges of double-hung sash windows with glazing bars, in 4-centred arches with hood moulds. Porch at west end. Octagonal tower at east end with crenellated parapet, and blind decorative panels on north side. Last end has tripartite double-hung sash windows with intersected glazing bars. Iron railings to area, with urn finials. {1} {2}

Description and Sources

Description

1850 (Date panel). Upper greensand. Ashlar plinth, coping and dressings: otherwise rock-faced rustication. Lodge adjoining gate is rectangular with 4 smaller rectangular turrets at angles. Pointed archway with machicolation above. Wall has crenellated parapet, with bartizans on outer side and semi-circular bastions on inner side. The Town Gate and Castle Walls were built as a result of the proposal of 1833 whereby the Duke of Norfolk undertook to build a new Town Hall at his own expense, in return for the gift of the north part of the High Street, which he wished to enclose within the Castle grounds [Town Hall Deeds]. The Town Hall was complete by 1338 [Borough Council Archives]. The new London Road was built in 1341 [Arundel Castle Archives], so presumably the upper part of the High Street was appropriated then. The houses on the east side, north of No 34 were pulled down by 1546 [print of Triumphal Arch of flowers on site of present Town Gate at time of Queen Victoria's visit in 1846]. The walls and gatehouse, however, only date from 1850 [date panel]. {1} {2}

Description and Sources

Description

1833-8. The 12th Duke of Norfolk agreed to build a new Town Hall at his own expense in 1833 [Town Hall Deeds] in return for the gift from the Town of the north part of High Street, which he wished to enclose within the Castle Grounds. The Town Hall was probably complete by 21st October 1836, when the Corporation discussed its conveyance to the Town. It was certainly complete by 29th March 1838 when the Paving Commissioners met there for the first time [Corporation Archives]. Architect probably Robert Abraham, who was employed by the Duke of Norfolk on, as yet, unspecified work in Arundel during the 1830's [Colvin. Biographical Dictionary of English Architects, p 27]. He was definitely the architect of the Congregational Church (1836-8), which is very close to the Town Hall in style [Union Church Archives]. Knapped flint with galleting. Pulborough stone dressings and ground floor arcade. Yellow brick dressings at sides and south (rear) elevation. Red and grey brick foundations and basement. 2 storeys, basement, and towers. End bays of north elevation break forward and are continued upwards as towers. Triple arched loggia on ground floor between these bays, crowned by parapet. Arches and window embrasures are semi-circular, with roll mouldings and cushion capitals. 3 recessed oblong panels above 1st floor windows. Statue of swallow on parapet of south elevation. Police cells in basement. {1} {2}

Description and Sources

Description

Site of Outfarm, Arundel, has been identified as a Historic Outfarm through the 'Historic Farmsteads and Landscape Character in West Sussex' Project. The project aimed to represent all farmsteads shown on the Ordnance Survey 2nd Edition 25" mapping of 1895.
Outfarm was a 19th century single sided loose courtyard outfarm or field barn. It was in an isolated location but the outfarm has been totally demolished/lost. {1}

Description and Sources

Description

A workhouse built in 1831 and altered in the early 20th century. {1}

Arundel had a poorhouse from at least 1682, probably sited on the east side of Park Place. In 1713 it was recorded as housing poor children and widows. A new workhouse was built in its garden in 1779-80. Arundel was incorporated as a Gilbert Parish sometime after 1782. In 1831, it built a workhouse and the same site at the southern end of what had become Poorhouse Hill, now Mount Pleasant, in Arundel. Arundel's status as a Gilbert Parish exempted it from many of the provisions of the 1834 Poor Law Amendment Act. The workhouse continued in operation, having 41 residents in 1841, 33 in 1851, and 15 in 1861. The Parish continued in operation until 1869 when all remaining Gilbert Unions and Parishes were abolished. Arundel then became part of the East Preston Poor Law Union. In 1871, the former Arundel workhouse used as a temporary smallpox hospital. In the earlier part of the twentieth century, the building was used as a club house and in 1985-6 it was converted into flats. {2}

Listed as"Poor House Outbuilding Yard Garden etc" on Arundel Tithe Map (App number 400) dated 11th September 1840. {3}

SMR Number	Site Name	Record Type
MWS13337	Land at the Former Texaco Garage, Arundel - Archaeological Investigations	Negative Evidence

An archaeological desk based assessment was carried out at the Former Texaco Garage, Arundel. The assessment identified that due to the extent of past post depositional impacts it is considered unlikely that the proposed development would have a very significant archaeological impact.

An archaeological watching brief was carried out at the Former Texaco Garage, Arundel, during the removal of decommissioned fuel storage tanks. No archaeological features or finds were observed.

Monument Types and Dates

Negative Evidence (Unknown date)

Evidence	Excavation/Evaluation
Evidence	Survey

Description and Sources

Description

The Desk-Based Assessment considers land at the former Texaco Garage, Queen Street, Arundel. The sites archaeological potential for the Palaeolithic and Mesolithic periods is uncertain, however any palaeolandsurfaces to these periods will be at least 7m below existing ground level. Queen Street was built c.1200 as a causeway across the marsh and from the 13th century buildings were established along the causeway, though by the late 18th century there were only 15 to 20 buildings. Development is likely to have extended back approx. 30m from the street frontage. By 1845 the site was occupied by buildings of the Swallow Brewery and during the 20th century was redeveloped on two occasions as a petrol garage complex with underground fuel tanks most recently after 1990. Due to the extent of past post depositional impacts it is considered most unlikely that the proposed development would have a very significant archaeological impact. {1}

An archaeological watching brief was carried out at the Former Texaco Garage, Arundel, in advance of residential development. The site is located at Queen Street, Arundel, and is bounded to the east by Queen Street; to the north by buildings fronting on Queen Street, to the east by Fitzalan Road and to the South by Queens Lane. The site lies at approximately 3.05mOD.
The archaeological work consisted of monitoring and recording the removal of decommissioned fuel storage tanks from the former filling station. The trench, measuring north-south 15m by east-west 15m, was excavated at the southern end of the site to a depth of c. 5.50m below ground level.
Natural alluvial clays were observed at around 1.25m OD. The watching brief revealed no archaeological finds or features. {2}

Description and Sources

Description

14 Fitzalan Road is a former ancillary building of the Swallow Brewery, constructed in c.1897 and is a relatively late example of a utilitarian building. The Swallow Brewery has clear local historic interest, as a link to a once major industry and its ties to a prominent local family. However, the former brewery building which is the subject of this assessment is one of the last remnants of a once substantial industrial complex. Furthermore, subsequent alteration internally, including the loss of any fixtures and fittings related to its original use, mean that the historic interest does not outweigh the lack of architectural interest and the loss of context.

After examining all the records and other relevant information and having carefully considered the architectural and historic interest of this case, the criteria for listing are not fulfilled, and therefore 14 Fitzalan Road is not recommended for listing.

REASONS FOR DESIGNATION DECISION
The former Swallow Brewery building at 14 Fitzalan Road, Arundel, c.1897, is not recommended for listing for the following principal reasons:
* Architectural interest: built of standard materials to a simple design, the building is typical of its type and date, demonstrating little architectural interest or innovation;
* Alteration: internally the building has been subdivided, and no original fixtures or fittings relating to the brewery process remain;
* Context: none of the associated brewery buildings survive, obscuring the role and purpose of this building.

HISTORY
The first reference to the Swallow Brewery in Queen Street, Arundel, comes from a trade directory dating from 1783, although this evidence does not give any indication as to the extent of the brewery site at this time. George Sefton Constable invested in the company in 1845, forming GS Constable and Sons. They owned the Swallow Brewery as well as the Anchor Brewery in nearby Littlehampton high Street. Map regression shows a large complex present on Queen Street on the 1876 edition of the Ordnance Survey (OS) map. The section of Fitzalan Road which runs parallel to Queen Street forms the western boundary of the brewery site at this time. 14 Fitzalan Road first appears on the 1897 edition of the OS map, located on the opposite side of Fitzalan Road to the rest of the brewery complex.

There appears to be little change in terms of ownership until 1921, when a merger with G Henty and Sons of Chichester lead to the formation of Henty and Constable (Brewers) Ltd. As a consequence of this merger production had ceased at the Queen Street site by 1922, and was transferred to Chichester. It is not clear what, if any, use the buildings on Queen Street had after this date, but it is believed that the majority of the brewery buildings were demolished by 1937. It is understood that 14 Fitzalan Road has had various industrial uses since brewery production creased, including a saw mill and joinery works. It is currently (2017) in use as an architectural blast cleaning and finishing workshop.

Besides 14 Fitzalan road, there are only fragmentary remains of the brewery remaining. The exact function of this building in relation to the brewery process is not clear. It has been suggested that the single-storey range may have been used for the drying or fermenting of grain, based on the raised lantern or louvre found on the ridge of the building, as this would have provided ventilation for such a process. However, no documentary or physical evidence has been seen to confirm this. The two-storey range would appear to have had storage and/or loading function, based on the doors and remains of the pulley system at the first floor level.

DETAILS
Former ancillary building of the Swallow Brewery, Arundel, built in c.1897.

MATERIALS
Dark red/purple bricks laid in English bond, with slate roofs. Some fragmentary ironwork remains to the front elevation of the two-storey range.

PLAN
The building is of a long rectangular plan, consisting of a two-storey main range to the S, with a further single-storey range

ARUN DISTRICT COUNCIL AB/36/18/PL

connected to the N.

EXTERIOR
The southern range is of two storeys with a pitched slate roof. There is a truncated chimney at the N end. There are seven bays to the front elevation which is largely symmetrical. At ground floor level, there are window openings to three bays either side of a two-leaf door in the central, fourth bay. The openings have red brick dressings, rounded brick sills and elliptical arch heads. They hold casement windows, each with eight glazes, except for the first, third and seventh bays where the windows have been replaced with C20 timber louvres.

The central fourth bay at first floor level also has a two-leaf access door. The lintel above the door has had a rolled steel joist inserted, which projects out. To the S of the door there are remains of a crane and pulley system. Again, the three bays either side of the central door house the same casement windows and openings, except the second bay. This bay holds a door which was previously accessed by an external stair. A small fitting underneath the door likely relates to the lost staircase, but this is all that remains.

The single-storey range to the N is built of the same purple/red brick with a slated front pitch, including some apparently replica tile to the back. The rood also has a central ventilation lantern with timber louvres and possibly a second blocked chimney to the N. There is an elliptical arch opening to the centre, with a timber double door, and three modern casements to either side with rounded brick sills. There is a second timber door to the N. The building has a rounded corner at its N end which follows the road around to the W. The rear elevations were not accessible and are largely hidden by C20 buildings.

INTERIOR
The two-storey range is accessed from the outside through a two-leaf door in the central ground floor bay. The two-storey range has been subdivided to the ground floor, and the N room appears to retain an engineering brick floor. The rear wall has an opening leading to a C20 extension. A second smaller room is located at the far S end of the building and is accessed through a two-leaf door in a C20 partition. This room has a C20 panelled ceiling, concrete floor and painted brick walls.

The upper floor of the two-storey range is accessed through a door in the rear of the N room, which houses a staircase climbing toward the SW corner of the building. The staircase retains some wide board plank panelling to the walls. At the top of the staircase, three rooms have been inserted using late C20 partition walls and doors. The interior of these rooms were not seen. A small corridor leads from the top of the stairs to a large open area to the N, which occupies the four northern bays.

The open space also has painted brick walls. To the S of the door in the fourth bay there is a wheel which would have held a rope, attached to the pulley outside through an opening. In the floor adjacent to the door there is a trap door leading to the ground floor, although this has been made redundant by the ceiling installed at ground floor level. The W wall has a small single-pane casement window roughly adjacent to the fourth bay, and a single C20 exit door adjacent to the sixth bay. The roof structure is made up of timber tie beams with metal king posts, raking shore trusses and metal rods. There are six bays and six trusses. This is a common rafter roof with clasped purlins and a ridge piece planked to the underside.

Back at ground floor level, a partition gives access to the single-storey range from the N end of the two-storey range. The single-storey range has essentially been subdivided into two rooms of roughly equal size. The first room retains the same engineering brick floor which merges into a concrete floor. There is a system of steel joists along the ceiling that would appear to have been inserted as part of the current use of the building, in order to move work to and from the ground floor loading door. The adjoining room to the N is accessed through another C20 partition, and has a concrete floor and a lowered timber ceiling with inserted lights. There is another small recessed room to the far N, the interior of which was not seen.

Description

The first reference to the Swallow Brewery in Queen Street, Arundel comes from a trade directory dating from 1783, although this evidence does not give any indication as to the extent of the brewery site at this time. George Sefton Constable invested in the company in 1845, forming GS Constable and Sons. They owned the Swallow Brewery as well as the Anchor Brewery in nearby Littlehampton High Street. Map regression shows a large complex present on Queen Street on the 1876 edition of the Ordnance Survey (OS) map. The section of Fitzalan Road which runs parallel to Queen Street forms the western boundary of the brewery site at this time. 14 Fitzalan Road first appears on the 1897 edition of the OS map, located on the opposite side of Fitzalan Road to the rest of the brewery complex.
There appears to be little change in terms of ownership until 1921, when a merger with G Henty and Sons of Chichester lead to the formation of Henty and Constable (Brewers) Ltd. As a consequence of this merger production had ceased at the Queen Street site by 1922, and was transferred to Chichester. It is not clear what, if any, use the buildings on Queen Street had after this date, but it is believed that the majority of the brewery buildings were demolished by 1937. {1}

Buildings depicted on the same site as the Swallow Brewery are recorded on the Chichester-Arundel Ordnance Survey drawing of 1805-6, the 1840 Arundel Tithe Map and the 1st - 4th edition Ordnance Survey historic maps. {2} {3} {4} {5} {6} {7}
