Subject: Planning application AB 60 17 PL

Dear Mrs Gardner

We note that the planning application above has been granted an extension. From the correspondence it appears the delay centres around the existence of the culvert. Please find an email to follow containing images that may assist. The images are of the culvert itself from where it transects our boundary. Then where the manhole is at the boundary of 76. There is also a map which may assist. In addition an image of where it comes from the A27 into the land known as Canada Gardens. From our research we are unsure of the ownership of the part in public land. It appears however no one appears to have knowledge of it (including Southern Water) as it's been unmaintained for several years except for by ourselves. From previous experience we believe the environment agency should be consulted regarding any queries about building over a piped culvert. We will in due course be seeking the responsible agency for the open part of the culvert due to increased fly tipping.

Kind Regards

Mr and Mrs Squires
