

9 Penfolds Place Arundel West Sussex BN18

The tree in question is a mature Hornbeam approximately 45 foot tall that I have previously maintained over the past five years recent works the garden have cleared round the base of the tree which unfortunately has exposed heavy decay at the base and evidence of bleeding canker due to the location of the tree being but 1.5 metres away from the property I see no alternative But to recommend the removal of the tree to ground level.

In the rear garden of the property is a large Oak tree 45 foot tall that in recent years has extended laterally towards the property and in another year will be in striking distance the proposed works would be a sympathetic Crown reduction on the east side of the canopy by 1.5 metres, by only have a small reduction this will not alter or unbalance the tree keeping the canopy looking natural.

Oak Tree
