

5 Surrey Street Arundel BN18 9DT

There are three trees in question The first tree is a Yew Tree located very close to the adjacent property in previous years we have maintained this said the proposed works will be to reduce the canopy by one metre in height and width the current height is 10 metres and the lateral canopy spread is 6 metres .

the next tree is a Sycamore tree that we previously have pollarded we would like to replicate that work again and repollard the tree the current height of the tree is 10 metres we would like to repollard back to a height of six metres.

the final tree is a mature ash in recent years the customer has had lots of issues with the root system affecting the surrounding area and foundations of the wall also all ash trees are being affected by ash dieback so ultimately this tree will die in the near future the proposed works would be to remove this tree to ground level intern Halting any further damage to foundations. the tree is currently 12 metres high
