Dear Mrs. Hodson,

Large Holm Oak

Further to your concerns about the excessive shade and overhang from this tree I suggest the following works to improve the situation without spoiling the crown profile or detracting from the visual amenity.

Remove one descending low limb of 20cm approx. diameter overhanging the garden of no. 24.
Remove three descending limbs of 12cm approx. diameter overhanging your garden.
Remove one low limb of 20cm approx. originating on the north side at the main fork.

This action would allow much more light into the garden.

Yours sincerely,

Stuart Power.
