

Application No: AL/66/21/PL

Site Address: Land Rear (South) of Sundown Littleheath Road Aldingbourne BN18 0SR

Description of Works: 1 No. 4 bedroom detached dwelling with a detached 3 bay garage (2 open bays and 1 enclosed), associated foul field drain, storm soakaway, new front boundary treatment, roof mounted PV & Ground Source Heat pump System (resubmission following AL/32/19/PL). This site is in CIL Zone 3 and is CIL Liable as new dwelling.

Bats:

The hedgerows on site are used by bats for commuting and foraging and will need to be retained and enhanced for bats. This will include having a buffer strip around the hedgerows (5m) and during construction fencing should be used to ensure this area is undisturbed. Any gaps should also be filled in using native hedge species to improve connectivity. Conditions should be used to ensure this.

The lighting scheme for the site will need to take into consideration the presence of bats in the local area and the scheme should minimise potential impacts to any bats using the trees, hedgerows and buildings by avoiding unnecessary artificial light spill through the use of directional light sources and shielding.

We require that a bat brick is integrated into the building onsite facing south/south westerly positioned 3-5m above ground.

Nesting Birds:

Any works to the trees or vegetation clearance on the site should only be undertaken outside of the bird breeding season which takes place between 1st March – 1st October. If works are required within this time an ecologist will need to check the site before any works take place (within 24 hours of any work).

We would like a bird box to be installed on the house/ and or tree within the garden of the property.

Reptiles:

To ensure the site remains unsuitable for reptiles, continued management of the site must take place to ensure reptile habitat does not develop onsite. If this is not possible then a precautionary approach should be taken within the site with regards to reptiles

Hedgehogs:

Precautions should be put in place for hedgehogs and the site will need to be searched carefully before works begin. If any small mammals including hedgehogs are found they should be relocated away from the construction area into surrounding suitable habitats.

Any brush piles, compost and debris piles on site could provide shelter areas and hibernation potential for hedgehogs. These piles must be removed outside of the hibernation period mid-

October to mid-March inclusive. The piles must undergo soft demolition. A hedgehog nesting box should be installed within the site to provide future nesting areas for hedgehogs
