Dear Ms Meeus,

I am writing to you with reference to the application above mentioned.

In your consultation you have stated and agreed that the distance between the site of the application and Barnham railway Station is 3 km by foot.

May I ask how you have come to such a conclusion? Have you used the footpath stated in the application? Or have you used other methods of calculating this distance?

I'm simply wondering as I am a resident of Norton lane and without adding the distance from the lane through Old Dairy lane to the site of the proposed development , I have today walked from the lane to Barnham railway station alongside the footpath mentioned in the application and approved by you.

According to my Apple Watch gps (Apple series 5) and video footage I have taken during my walk to Barnham station, the distance is actually 5.57 km. That is considerably longer distance verging onto double what you have stated it is in your consultation.

Would you be so kind as to explain to me how you have arrived to the 3 km distance from Norton lane to Barnham railway station? Maybe there is another route you have walked on other than the one stated on this application?!

Via google maps and walking down Norton lane, Nyton road and so on, both without footpaths and therefore too dangerous to walk alongside, the distance is 5.12 km (3.2 miles).

Looking forward to your reply.

Best wishes,

Dr. Anca Voropanov-Oldham
