PLAN-029656

Date
10/10/2019

Dear Sirs,

Proposal: Construction of 8 no. dwellings, alterations to access and associated works - This is a Departure from the Development Plan.

Site: AL/75/19/PL: - Bridge Cottage, Lidsey Road, Bognor Regis, PO22 9PH.

Thank you for your letter dated 06/09/2019.

The Environment Agency should be consulted directly regarding the use of a septic tank drainage which disposes of effluent to sub-soil irrigation. The owner of the premises will need to empty and maintain the works or septic tank to ensure its long term effectiveness.

Southern Water would not support the proposals for septic tank or private treatment plant in the presence of public foul sewerage network in the close vicinity of the development site. The foul sewerage shall be disposed in accordance with Part H1 of Building Regulations hierarchy.

It may be possible for the foul flows from the proposed development to be connected to a nearby public sewer, and the applicant shall investigate this option. Southern Water requires a formal application for a connection to the public foul sewer to be made by the applicant or developer.

Southern Water requires a formal application for a connection to the foul sewer to be made by the applicant or developer. We request that should this application receive planning approval, the following informative is attached to the consent:

A formal application for connection to the public sewerage system is required in order to service this development. Please read our New Connections Services Charging Arrangements documents which has now been published and is available to read on our website via the following link <https://beta.southernwater.co.uk/infrastructure-charges>

The planning application form makes reference to drainage using Sustainable Urban Drainage Systems (SUDS).

Under current legislation and guidance SUDS rely upon facilities which are not adoptable by sewerage undertakers. Therefore, the applicant will need to ensure that arrangements exist for the long term maintenance of the SUDS facilities. It is critical that the effectiveness of these systems is maintained in perpetuity. Good management will avoid flooding from the proposed surface water system, which may result in the inundation of the foul sewerage system. Thus, where a SUDS scheme is to be implemented, the drainage details submitted to the Local Planning Authority should:

- Specify the responsibilities of each party for the implementation of the SUDS scheme.
- Specify a timetable for implementation.
- Provide a management and maintenance plan for the lifetime of the development.

This should include the arrangements for adoption by any public authority or statutory undertaker and any other arrangements to secure the operation of the scheme throughout its lifetime.

The Council's Building Control officers or technical staff should be asked to comment on the adequacy of soakaways to dispose of surface water from the proposed development

It is possible that a sewer now deemed to be public could be crossing the development site. Therefore, should any sewer be found during construction works, an investigation of the sewer will be required to ascertain its ownership before any further works commence on site.

Due to surface water inundation issues in the Lidsey Catchment the applicant is advised to adopt, where appropriate, the measures in the table "Practical measures to reduce the potential impacts of development". Developer should look to protect the public sewerage system from inundation and infiltration, which contribute to flooding in unfavourable conditions.

For further advice, please contact Southern Water, Sparrowgrove House, Sparrowgrove, Otterbourne, Hampshire SO21 2SW [REDACTED] www.southernwater.co.uk or by email at [REDACTED]

Yours sincerely,

[REDACTED]
