Work Schedule – Rear Garden:

T1 OAK TREE (Quercus robur): Crown reduction & crown lift.

This tree is dominating the garden and growing over both the neighbouring property and over the boundary towards both the footpath and main A29.

The tree appears healthy but there are a number of major fractures/tears within the main canopy where previous main stem failures have occurred. In our professional opinion, it is recommended to complete a 30% crown reduction (2.5-3.5m) and crown lift to keep the branches off the footpath and away from the road (5m). This will leave a span of 14-16m and height of 18-20m.

All branches and green waste are to be removed from the site and disposed of sustainably at Woodhorn Green Waste Site near Oving. Clear up all arisings and leave the site clean from all debris.

Additional Notes:

- All work is undertaken by fully trained NPTC professionals. Public Liability insurance is provided up to £5 million. Our experienced and fully trained arborists work to high arboricultural standards and will ensure that all work will comply with BS3998:2010.
