Dear Janet

Thank you for getting me over to take a look at your Large Monterey Pine

I have checked around the base of the tree and visually checked the main trunk. There are no signs of movement in the root plate, no signs of fruiting fungi and no physical defects to report. From viewing the tree from the street, I can see that there are a few dead and dying branches within the tree's canopy.

Recommended works - Remove dead and dying branches from the canopy. When climbing the tree a more thorough inspection of the tree can be carried out.

If I can be of further help please do get in touch.

John Bentley ( NDarb)
