Another approach to gaining space around this Yew tree.

Dear Cameron

Having reviewed the recent refusal for the removal of the Yew Dome T3 I believe a second option of crown lifting may be an answer to gaining a bigger foot print for planting in your garden.

I recommend the tree is crown lifted in two stages and the height of the tree encouraged to grow/increase. This will mean not cutting the top growth on this tree for three to four years. The result will be a taller tree of greater amenity value. Initially the tree could have a crown lift of around 1.5 meters. Then in three years time take it up to a 2meter crown lift. This may work for you as it will give you the area under this tree to establish shade loving plants.

To carry out the works recommended above will require another planning application.

I hope you find the above helpful. Please don't hesitate to get in touch if you have any questions.

Yours sincerely
