

23 Coventry Gardens

This is an English Oak tree (T1) situated on the verge line of Hewarts Lane, Aldwick. The tree is of Natural shape which has been previously pollarded on the south west side over hanging Coventry Gardens . We request a crown reduction of 2 meters on the South /S East side fading out to the top and round to the sides branches, leaving the most natural shape possible. The tree is 18M high and we do not want to reduce the height. It has a spread of 16 meters in light with Hewarts Lane (NE/SW) which will not be altered. The spread that goes in a SE to NW direction (Coventry Gardens to Pinhurst Park) is in the region of 14 M. We want to reduce the SE side by 2 M overhanging Coventry Gardens. We also wish to uplift the S/SE side by 3 meters. This will be a select few branches leaving all the main trunk. We will also remove dead wood on the S/SE side.
