Subject: Re: Thin out reverted shoots on two variegated Acer trees outside 46 Kingsway, PO21 4DN

Your Ref AW/173/19 TC

Dear Mr Crowther,

Thank you for your letter regarding the two Variegated Acers. Please note that my address is not 46 Kingsway. This is the nearest address to the location of the trees.

As I mentioned in my original mail the application AW/173/15/ gives further details. The trees are owned by Craigweil Private Estate Ltd, of which I am a Director. My home address is 15 Wychwood Close, PO21 4DW

I have attached an up to date plan of the location of the trees. You will note that they haven't moved since 2015, when the previous plan was drawn. Unlike the Ents in Fangorn Forest, Craigweil trees have not yet developed the ability to move about under their own steam!

Thanks for your help with this

Dear Sirs,

Please accept this as a section 211 notice of intent to carry out works to two trees in Craigweil Conservation area.

The two trees in question are variegated Acers, which stand on the verge outside of 46 Kingsway, Aldwick PO21 4DN. Previously there were three identical trees in this location but one died and was removed. The two remaining trees are quite healthy, but have an abundance of dark green reverted leaves which need to be removed to keep their variegated nature.

AW/173/15/TC previously granted consent to carry out this work, which has again become necessary. A location plan and further details can be found under this reference.

It would ease admin if you could grant repeat consent for this operation to be carried out when and where necessary.

Thanks for your help with this
