

## **Common Lime No.1**

### **Additional Information**

**Proposed Thinning:** *5% of Tree, this includes crossing branches and to allow light and air flow through the center of the tree.*

**Proposed Height:** *After reduction of the tree. I propose the height to be reduced to a height of 42ft (14m)*

*After reduction of the tree. I propose the crown spread to be reduced by approximately 30% of its original size. This would roughly be 36ft (12m) spread.*
