Dear John

Thank you for getting me over to take a look at the four trees in your front garden

I report the following findings and provide recommendations.

T1, Mature Sycamore Tree – This tree is in good health. I recommend the tree's upper canopy and the lateral spread is tipped back by removing approximately 1 meter all over. This will leave the tree at a final height of around 11 meters with a final crown spread of around 3.5 to 4 meters.

T2, Mature variegated Holly - In good health and so can be crown reduced by 0.5 of a meter in height and width, leaving the tree at a final height of 6 meters and with a crown spread of approximately 1.8 to 2 meters.

T3, Mature Hawthorn – This tree has not put much growth on but looks to be in average health for its age. I recommend a general trim of the secondary growth removing 0.3 of a meter all over, leaving the tree at a final height of 4 meters and a crown spread of 2 meters.

T4, Mature Sycamore tree - The tree is in good health and put on vigorous new growth since the previous prune. I recommend the tree is reduced by 2 meters in height leaving it at a final height of 9 meters. I also recommend the crown spread is pruned back by approximately 1.5 meters leaving it at a final crown spread of approximately 3 meters all around.

All above tree works will require Planning approval. The work would be best done this winter.

Please don't hesitate to get in touch if you have any questions.

Yours sincerely
