Dear Mr. Kennedy-Finlayson,

## Trees.

Further to my visit to view the situation concerning the three trees in your garden bordering the access road to Craigweil Manor.

### Norway maple (T1)

This tree appears to be in good condition and with typical vigour. It has been pruned to reduce crown size historically and, in order to keep the tree to a size suitable for the site, I suggest that these works are repeated and the new growth cut back to the previous pruning points.

### Holm oak (T2)

This tree also is in good order but is likely to become too large for the location without regular pruning. The last pruning works left it with dimensions more suitable for the site and I suggest that these works are repeated and the new branch growth cut back to the previous pruning points.

### Whitebeam (T3).

A good, healthy tree. In order to prevent nuisance from overgrowth I suggest reducing the height and spread by removing 1m approx. from all branch ends.

Yours sincerely,

Stuart Power.
