TREE REPORT

Re: Macrocarpa trees

The trees are both located in the back garden of the property, they are both, 40ft tall with a mature crown that has been reduced many times in the past.
There are visual signs of die back and age related stress features in both trees.
T1 is leaning towards the property and the crown overhangs the roof.
They have been planted in close proximity to each other as boundary trees however have now outgrown the space.

Recommendation:

Felling of T1 as it poses extreme hazard to the property.

Crown lifting T2 to a height of 4.5 metres to balance the tree and give more light to the understory and the property.

This is a visual report on the trees current situation; I accept no responsibility for the trees.

Regards,

Nick Wilson.
