Dear Simon

The Macrocarpa Tree is situated very close to the highway and a good percentage of the tree is overhanging the highway, the tree is not of visible beauty and think it upholds threat to life and passing traffic, this is a busy road and we are worried this tree may split where the tree breaks in to two limbs, most trees with twin stems of the softwood variety are never 100% safe and we feel that this tree is too much of a threat where it is situated.

Kind Regards

Nigel Sampson
