Mr. & Mrs. Baxter,
1 The Drive,
Aldwick.

13th. August 2011.

Dear Mr. & Mrs. Baxter,

Trees Along the South and West Boundaries

I have had a look at the situation concerning the holm oaks and leyland cypress trees with a view to increasing the light reaching the house and garden. Some pruning works to the trees would be beneficial in this respect and I list below the works which I feel would go some way to meeting your requirements without diminishing the amenity value of the trees.

2 Holm oaks just west of the drive entrance.

Reduce height by 25% and raise crown base to 4m.

3 leyland cypress standing inside the garden and west of the above.

Reduce the two larger trees by 20% approx. to the height of the previous pruning works.

Reduce the third, slender tree to match the other two.

Large holm oak standing on the roadside and north of the above cypress.

Reduce height by 25%.

Eucalyptus Overhanging the North End of the Garden

This tree is about 14m in height and leans heavily over the garden from property on the east side. The extent of the overhang is considerable and the tree could fall or shed limbs on to your property. In order to make safe I suggest removing three large lateral limbs on the west side and reducing height by 25%.

Yours sincerely,

Stuart Power.
