Technical Support Unit on extn. 37711

6th August 2019

Dear Mr Darren Wilkinson

Development:

T1 - Willow - Remove central leader forming from multi stem structure roughly 3m from ground level, branch has symptom consistent with x2 woodpecker holes approx. 4m from ground level. Wounds approx. 10cm diameter showing little signs of occlusion around wound edges. Re pollard remaining tree back to previous points to prevent branch failure due to poor attachment of pollard points.

T2 - Willow - Crown reduce by up to 3m, works to reduce likelihood of failure from branches over extending towards the east. Over extension appears to be symptom of phototropism as tree is growing as part of a group feature.

Location:

Street Record Countisbury Close Aldwick
