

## **Description of Proposed Works**

**19 The Drive, Bognor Regis, West Sussex, PO21 4DU**

**(see attached *Tree Location Plan*)**

Oak Tree (1) : The tree is located in restricted space on the property and is adjacent to the footpath that runs between The Drive and Kingsway. Growth can obstruct the footpath and intrudes onto the neighbouring property. The tree has been pollarded in the past and it is proposed that pruning should be carried out to the previous pollarding points.

Strawberry Tree (2) : This tree has been subjected to repeated limb falls and breakages as a result of its exposure to high winds. In the past two winters, limbs have fallen onto the adjacent footpath posing a risk to passers-by. The proposed crown reduction is intended to improve the resilience of the tree.

Bay Tree (3) : The tree consists of two main stems, one of which has been denuded entirely of all foliage as result of Honey Fungus attack. It is proposed that the damaged stem should be removed.
