5th October 2010

Dear Mr and Mrs Rammage

Further to my recent visit to your property I enclose the following recommendations for tree works. I refer to the trees located in your front garden, shown on your sketch plan and in the photos which you have provided.

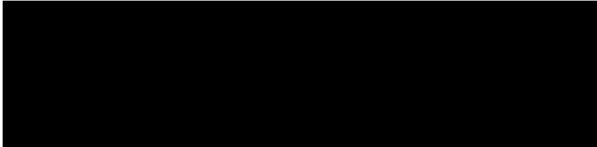

Trees marked 1 and 2, which are Ilex or Holm Oaks – these two trees require removal of major dead wood. It would also not harm these trees to lightly crown lift their easterly canopies to match in with the canopy height over the drive. (Approximate crown lift to around 10 to 12 feet).

Trees 3 and 4, which are English Oaks, may also be dead wooded and crown lifted to match in with The Ilex Oaks previously mentioned.

Out on the front verge, on the east side of the drive, is a Holly which you have discussed removing. This will enable the hedge behind to thicken up and in conjunction with the Holly being felled I would recommend a light crown lift of the multi stemmed Sycamore.

The Oak tree marked number 6 has die back in its upper canopy as shown on the photo. Along with removal of major dead wood we will remove dieing tips back to sound growth. It is important to retain as much of the trees active branch structure as is possible.

The remaining Oaks and Sycamores marked on the plan are all in average to good health. I would recommend that the only course of action for these trees is the removal of major dead wood.
