

Trees. 40, Kingsway PO21 4DL

At Rear

1. Elder – Remove dead wood
2. Yew – Remove dead wood. Raise crown by removing 3 lowest branches - 2 at junction with main eastern stem and 1 branch (dead or dying) from western stem.

At Front

- 3 Yew – reduce crown height to 6m and shape top to maintain present form.
- 4 Hornbeam- About 1.5m above ground, the main trunk divides into four. Two to the south grow more or less vertically and the other two lean to the north. The crown height to be reduced to 7m, just above that of the yew (T3), and shaped to a rounded top. Cut back side branches on south (away from yew T3), on north (away from holly T5), west (to boundary) and east (to line of drive and away from the hawthorn T7 and oak T6).
- 5 Holly - shape top branches where they bend from the vertical to maintain conical shape.
- 6 Oak, remove dead branches, those that are rubbing and side branches extending into cherry on the verge and Holly (T5) and hawthorn (T7)
- 7 Hawthorn. Reduce crown height to 7m and sides by 50 cms to maintain roughly round crown.
