Tree Report

Tree Location: Back Garden of 12 Margaret Close, Aldwick, Bognor Regis, PO21 3AA.

Tree Species: English Oak

Estimated age: 60-80 yr

The reason for this report is a 15cm diameter branch has recently fallen in high winds and landed on the roof of the conservatory below, the southerly spread of the canopy is spanning over the property so is likely to shed more limbs in high winds causing damage and therefor putting the homeowner at risk. The southerly spread is also blocking light to the property causing algae to grow affecting the growth of other plants.

The tree is in good health and will continue to thrive for years to come, I recommend a 50% reduction of the southerly spread too resolve the above issues whilst keeping the trees amenity value.

The trees current southerly spread is approximately 7m from stem to extremities, the height is approximately 15m. I propose reducing the southerly spread so it results in 3.5m the height of the tree will remain untouched at 15m, the remaining spread will also be left untouched resulting in 6m to the east and west and 5m too the north.

Kind regards, Luke Bentley.
