Dear John

Thank you for getting me over to take a look at the trees around you garden.

I report on the following trees which I recommend works to - T1, T2, T3 & T4- shown on my plan.

T1 – Mature Sycamore. This is a vigorous healthy tree. It was last pruned some three to four years ago. It is now starting to overpower the surrounding trees. I recommend it is pruned back to where it was previously done. A height reduction of 1.5 meters and pruning of lateral growth all around by approx. 0.5 of a meter.

T2 – Mature Holly. This tree is also in good health. To keep it in check, it needs 1 meter reduction in height and minimal pruning all around (tip back lateral spread by 0.3 of a meter)

T3 – Mature hawthorn. This is a very vigorous tree which has responded well from its previous pruning. Reduce and reshape by approximately 1 meter all over.

T4 – Semi mature Sycamore. The tree is in very good health. To maintain a balance in the garden and prevent this tree dominating, I recommend it is topped by removing 1.5 meters in height and the lateral spread reduced by pruning off approximately 0.5 of a meter all around.

I hope the above helps you move forward in maintaining your gardens balance. Please don't hesitate to get in touch if you have any questions.

John Bentley ND Arb
