

Condition 3 Plan – planning application ref AW/129/12

The fence to be erected will be similar in construction to the one indicated below.

This will replace the current 4ft 6in concrete posts with 6ft 6in concrete posts, to allow for a 6in concrete gravel board at the bottom to reduce the deterioration of the fence as occurred previously.

The fence panels will be close board feather edge fencing.

On completion of the fencing the panels will be painted a dark oak preservative to protect the fence and to bring it in line with the fencing of the adjoining property.

The concrete posts will also be painted in a similar dark oak colour to soften the appearance of the concrete and blend it in with the fence panels.

Below is the fence colour that we intend to use for the panels and similar for the concrete.
