17th November 2011

Dear Mr and Mrs Brown

Further to my visit on the 15th this month I enclose my following recommendations and quotation.

The four Field maple trees: Crown reduces and reshapes their canopy's by one third (dealing with all four trees as one canopy). This will involve a reduction of approximately 1.5 to 2 meters growth all around.

The Four English Oak trees: Remove all major dead wood from their canopy's and crowns lift the second Oak tree in from the west end. This will involve leaving the trees lower canopy clearance, at approximately 2.5 to 3 meters from your lawn. (Minimal Pruning).

Fell and remove the conifer tree at the front of your driveway.
