REF: 74 Pinehurst Park

Good morning Mr Barrett,

Thank you for contacting us reference the *Populus nigra* Black Poplar trees.

After making an evaluation of the trees structural integrity, it was clear to see the level of decay, the lateral growth that has snapped on the summer house shows there has been movement and is evident these trees are structurally unsafe.

In my opinion these trees would need to be removed and should be under the Dead Dangerous legislation.

You should give 5 days' notice to the local authority to make them aware of the removals and you should make your client aware that replacement trees would need to be planted due to the protection order.

If you have any further tree concerns in the future please do not hesitate to contact us.

Yours sincerely
