

Tree Report

Site Address: 28a kingsway, Pagham, P021 4DH

After visiting the above address it is in my opinion that the Pittosporum (T4) which is running along the front of the property is to be removed and replace with a mix of Silver Birch and Beech planted at 2.5-3m tall. The reasoning for the removal of the Pittosporum is that the group of shrubs has gotten overgrown and structural issues are occurring with large limbs becoming dead.

Also to fell to ground level and replant in their place are 1 small oak (t1), 1 small Norway maple (t2) and 1 medium holly (t3), which have forged as 1 tree in turn making the surrounding area over shaded and unsightly for the area. Replanting to take place in the position of these three trees with 1 english Oak being planted at 2.5-3m tall.
