Dear

Tree Report for 9 Kingsway, Bognor Regis
Ref: AW/316/21/T

It is in my professional opinion that the 1 x Oak Tree has unsubstantial root anchorage around the base of the tree we have watched this tree on a windy day and it has root movement and is moving quite considerably as a whole.

Regarding the 2 x Field Maple Trees they are showing very poor growth with very little live growth and decay around the main stems, these trees run along the back of the property which has a neighbouring property and so in the winter time the base of these trees will spend some time under water as the ditch fills, in my professional opinion these trees need to be removed.

Kind Regards

Nigel Sampson
Greenbelt Tree Surgery

Yours sincerely

Nigel Sampson
