Dear Mrs. Clarke,

MATURE OAK TREE

Further to my visit concerning the large oak at the back of your property.

The tree is a healthy specimen about 20m in height with two main stems arising from close to ground level. Growth form is typical of the species.

Your concerns about the size of the tree and the amount of shade to the garden could be addressed by removing the north stem entirely. This action would leave the remaining stem as a well-balanced tree which does not overshadow the garden and with no need of pruning works at this time.

Yours sincerely
