Trees trimming at 38, Kingsway PO21 4DL

As far as I can check on the Arun planning portal only the 3 Yew trees (No. 4,5 & 6) have been trimmed in past 20 years the remaining trees have had no surgery and some of these trees have grown out of proportion to their settings, creating excessive shading and interference with other neighbouring trees and house.

This application is to trim these trees and at the same time reduce the 3 Yew trees of 3 years growth (See attached plan for location of all 6 trees indicated below).

- 1 Hornbeam (No.1), this has grown out of proportion and is currently overshadowing both the neighbouring trees and the neighbours property. The excess growth to be cut back as per the recommendation of R.S Landscapes (see attached letter).
Reduction of 3 long trunks growing in a north easterly direction over neighbours property, to be reduced by 4 metres.
Pruning back lateral branches away from the house and neighbours garden by 2 metres.
Light reduction of lower branches of the side that faces the prevailing wind.
- 2 Yew tree (No.2) growing under the shadow of the Hornbeam, and Oak tree (no,3) has become leggy and showing lack of light induced dieback, requires a height reduction of 2 -3 metres to encourage stronger growth, this needs to be carried out in conjunction of the reduction to trees No.1 & 3.
- 3 The Oak tree (No.3) on the other side of the Yew tree is growing away from the prevailing winds requires light pruning of about 1 metre to stop encroachment of the canopy towards the house.
- 4 Three Yew trees (No.s 4, 5 & 6) in the shape of round bushes need to be reduced by approximately 0.5 metre at the crown and its diameter in order to return them to the same size that they were when they were trimmed 3 years ago.
