Subject: AW/44/19/DOC 54 Kingsway

Dear Charlotte,
Please find attached a copy of the letter I have hand-delivered to Martyn White this morning.
The details of our choice of cladding are included with the letter along with a sample of the cladding which I also ask you to examine at your soonest opportunity.
I look forward to your response.
Many thanks
Annaliesa

Dear Martyn,

We propose to use Metsawood Thermowood Cladding for the vertical cladding on the front of our Extension.

I hope you will find this product suitable for the Craigweil conservation area.

METSÄWOOD THERMOWOOD®

Metsä Wood ThermoWood-D is produced by heat treating Finnish grown Pine and Spruce to temperatures in excess of 200 degrees Centigrade.

During heat treatment, chemical and structural changes occur within the timber which alter and improve some of its basic characteristics.

The resulting product is an altogether more durable and stable timber, an ideal material for use in exposed areas such as external wall claddings.

Please see accompanying literature for more detail of the product.

Please also look at their website for a more accurate impression of the colour of the product:

www.metsawood.co.uk/thermowood-cladding

This cladding is a more traditional choice. The information provided details how the material will age/weather over time, and the long-term affect this will have on the appearance of the building.

Many thanks for your help with this matter, and I look forward to receiving your feedback as soon as possible so we can proceed with our extension.

All the best

Mrs A Whitworth
