

Tree Survey Schedule
89-91 Westminster Drive, Bognor Regis, PO21 3RE

No.	Species	Height	Trunk diameter	Crown Spread	Age class	Physiology	Structure	Comments	Likelihood of failure	Likelihood of impacting target	Likelihood of failure & impact	Consequences of failure	Overall risk rating
1	Field maple (<i>Acer campestre</i>)	14m	440mm 320mm	6.25m N 4.5m E 1.25m S 6m SW 6.25m W	Mature	Average	Indifferent	Twin-stemmed from base; no significant changes in tone when lower trunk assessed with acoustic hammer; branch from adjacent tree rubbing at 2m causing damage to outer cambium layer of both parts; unbalanced crown as suppressed by adjacent specimen; one wind-exposed branch on SW aspect, appears to have failed in the past.	Possible	Medium	Unlikely	Minor	Low
2	Field maple (<i>Acer campestre</i>)	14m	450mm est	4.75m N 5.25m E 4.25m E 4m S	Mature	Average	Moderate	More dominant of the two closely growing specimens, suppressing T1; Minor deadwood throughout canopy. One wind-exposed branch originating at 2m on W aspect is rubbing on the trunk of T1 causing damage to outer cambium of both trees and appears to have failed towards branch extremities in the past.	Possible	Medium	Unlikely	Minor	Low
