Hi Amber

Both trees (Monterey cypress) are prominent at the front of the property. One of these is in poor physiological condition and unlikely to recover. There is boundary wall damage attributable to their root activity.

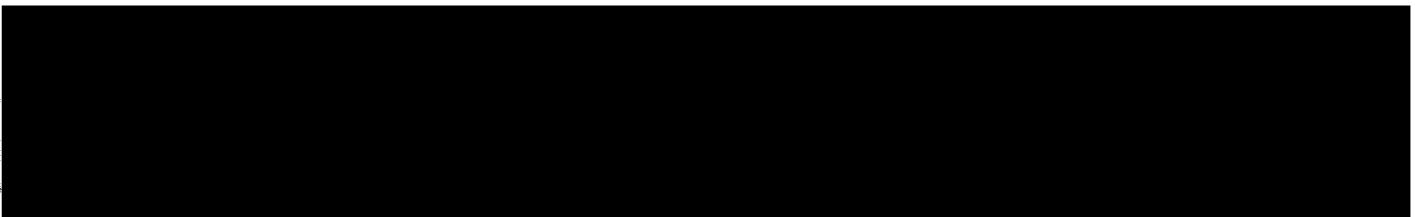

Neither tree could realistically be replaced in the same location and there is adequate tree cover locally so no significant loss of character to the surrounding area should they be removed. It is encouraging that the applicant has proposed two replacement trees somewhere on the property.

They have clearly begun to outgrow their location and neither tree has much useful life expectancy so I am not recommending we make an Order.

As the 6week notice period has now expired, I suggest we decide not to make an Order and inform the person who gave notice that the work can go ahead.

Kind regards,

Mark

Hi Amber,

Thank you for letting me know.

I will make an assessment on Tuesday next week. If the trees are worthy of TPO I will get a report to you shortly after. If they are not – then we can let it slide. I'll let you know either way.

Thanks,

Mark
