Re: 34 Kingsway, Aldwick Application ref; AW/89/10/T

Description of Works : Fell x1 Eucalyptus

The tree was inspected today and I noted its fastigiated nature with drawn up and tightly forked branches. I would regard these branch unions as unsafe and would recommend works their reduction.

The applicants reason for felling has not been substantiated. Poor drain function is a result of a defective drainage system where the tree would exploit the water exuding from it and proliferate to appear as the tree having caused the initial damage. Therefore I would recommend the application be refuse on that basis of understanding.

Yours sincerely

Ian Brewster
