Dear Mr Karl Roberts

I'm writing to you regarding the REP letter on the planning portal uploaded on the 04/10/19 from Mr B R Parsons at Wilmington.

I strongly disagree with the claims and statements what Mr Parsons has wrote along with the still photographs that don't give a true representation or perspective of the manoeuvre. Because they are a simply snapshot of a single movement in time i.e the vehicle may be parked or moving, however you cannot necessarily determine that from a photograph, therefore weight should not be attached to any such photographs as they maybe misleading.

The vehicles are moving at all times in a forward gear into the site with two banks-man for the whole time and caused no issues to the road users. We have carried out these manoeuvres successfully for the whole time of owning the site.(nearly 4 years now).

As previously pointed out there would be minimal trailer movements throughout the year due to the industry and life style we lead.

Mr Parsons quoted at the time of taking the still photographs "this is the first time I've ever seen you carry out a movement since owning the site" I think this reinforces the minimal movements that will be made.

The site is kept and maintained to a good level. We have also carried out additional planting of over 100 shrubs, trees, fruit trees etc to keep the site looking nice and well maintained whilst helping with the environment.

Kind Regards

Nic and Ben Burrell.
