LANDSCAPING PROPOSALS.

The proposed landscaping is intended to sit within the existing surrounding landscape whilst at the same time adding to the general appearance of the area, as well as enhancing biodiversity.

The landscape areas will meet all criteria, appeal to the new residents and of course, gain Local Authority approval. Local provenance stock will be utilised wherever possible. Stock selected will include species that are attractive to wildlife to enhance biodiversity.

The planting scheme will contain a reasonable amount of evergreen content for year round interest and structure, complemented by seasonal colour, offering a range of diversity for insects and birds. The scheme will be implemented in line with the building completion, maintenance of the planting will be started immediately to ensure successful establishment.

The attached Landscaping design highlights the areas planned for treatment, together with a schedule of species and quantities. Also included is a detailed landscape specification.

A variety of hard surfaces are proposed, including a tarmac main driveway, permeable resin bond surfacing with grey smooth flagstone paving to patios and side pathways.
