Dear Albert,

Re: Tree assessment of 1 x Quercus Robur at Acorns Campsite, Arundel Road Angmering, West Sussex.

With reference to our recent meeting regarding your tree work assessment, I am pleased to give a report on your Quercus Rober/ Oak Tree Common as follows;

- 1) The Oak in question has recently suffered a significant and deep scaring damage during high winds, which has changed the geometry of the crown considerably.
- 2) The large right hand bough, which has detached from the tree, has caused a large scaring, which can be corrected by correct tree operations/ pruning, to enable the retention of the tree, which has excellent stature and maturity.
- 3) The limb which is to the south, approaching the mobile property, would benefit from a crown reduction, to help balance the crown, and again retain the stature and future retention of the tree.

If you have any questions or need any advice, please do not hesitate to contact me. I look forward to hearing from you.

Yours faithfully,

Russell Gilpin/NPTC/ City & Guilds

Mr Albert Mariner, Acorns Campsite, Arundel Road Arundel, West Sussex.
