Hi Andrew,

Further to the below missive, as the first three points of the contaminated land condition have been met, EH would be satisfied for the development to commence on the understanding that a verification plan (meeting the criteria as outlined in the Phase II report, including evidencing of any exported/imported material, etc.) is submitted when the groundworks are complete.

Many thanks,

Kate.

Hi Andrew,

Thank you for forwarding the additional reports and for confirmation of the date of intrusive works.

Based on the Phase I and Phase II reports, it is not possible to recommend discharge of the contaminated land condition until the groundworks have been completed and a verification report has been submitted and approved.

Many thanks,

Kate.

Kate,

Further to email below. I hope that is sufficient information for you. I would note that all drainage conditions have been discharged on the site. The contaminated land condition is the final condition awaiting discharge.

Thank you,

Andrew Wood

Andrew, Kate,

Many thanks for the below.

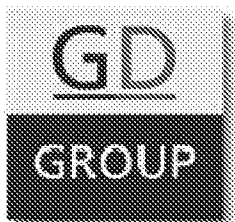

Please see attached information. The intrusive works were carried out 09/09/19, one day before the report was issued.

The winter GWM is ongoing but I have attached the relevant reports, we have had drainage and SUDS conditions discharged with the results forming part of the scheme.

If you require any further information please don't hesitate to contact me.

Kind regards

James Elsey

James,

Please see email below. Can you provide the information requested.

I have copied Kate Giddings the Environmental Health Officer responsible for this condition discharge into this email.

Thank you,

Andrew Wood

Subject: RE: A/132/19/DOC - Condition 21 - Consultation request

Hi Andrew,

Sorry for the delayed response; it took me a little longer than anticipated to check the submitted documents.

Having now reviewed Impact Geotechnical's Phase 1 Environmental Risk Assessment (ref.: P19.117/ERA, dated August 2019) and their Phase 2: Site Investigation Report (ref.: P19.117/SIR, dated September 2019), please may the developer/consultant confirm the date of the intrusive works as outlined in the Phase 2 report (section 5.1 Site Management and Preparation).

The above reports are satisfactory, however it is not possible at this stage to recommend the entire condition for discharge because the groundwater report remains awaited and the fourth stage of the condition (verification plan) has not yet been completed.

Many thanks,

Kate.

Hi Andrew,

Thanks for your e-mail.

This case has been allocated to Carol (Reynolds) and I was asked last Thursday to comment on the contaminated land aspect.

I am hoping to get a response to you by Wednesday at the latest if that's convenient.

Thanks,

Kate.

Kate,

Please see email below and attached document. As the contaminated land expert I understand you will be dealing with this matter. Can you confirm this is the case?

Thank you,

Andrew Wood – Planning

Neil,

Can you inform me who is dealing with this contaminated land condition at Merry England Nursery in Angmering ?

The condition is set out below and the phase 1 Environmental Risk Assessment (submitted and on the website as well) is attached to this email.

Thank you,

Andrew Wood

Condition 21

Prior to the commencement of development approved by this planning permission (or such other date or stage in development as may be agreed in writing with the Local Planning Authority), the following components of a scheme to deal with the risks associated with contamination of the site shall each be submitted to and approved, in writing, by the local planning authority:

1. A preliminary risk assessment which has identified:
 - all previous uses
 - potential contaminants associated with those uses
 - a conceptual model of the site indicating sources, pathways and receptors

· potentially unacceptable risks arising from contamination at the site.

2. A site investigation scheme, based on (1) to provide information for a detailed assessment of the risk to all receptors that may be affected, including those off site.

3. The site investigation results and the detailed risk assessment (2) and, based on these, an options appraisal and remediation strategy giving full details of the remediation measures required and how they are to be undertaken.

4. A verification plan providing details of the data that will be collected in order to demonstrate that the works set out in (3) are complete and identifying any requirements for longer-term monitoring of pollutant linkages, maintenance and arrangements for contingency action.

Any changes to these components require the express consent of the local planning authority. The scheme shall be implemented as approved.

Where demolition is required 1. and 2. above should be submitted prior to demolition. Parts 3. and 4. can take place post demolition if necessary.

Reason: To ensure that the development complies with approved details in the interests of protection of the environment and prevention of harm to human health in accordance with Arun Local Plan policy D DM1, ENV SP1, ENV DM3, ENV DM5. This is required to be a pre-commencement condition because these details have to be agreed and in place before any work commences.
