Dear Mrs Gardner

I have only just become aware of the planning application ... A/134/13 at the junction of Dappers lane and Water Lane , my only real concern for this , is the additional surface water not only in the village , but mainly its effect on the culvert just yards down the road from this development . As you know the pipe from this culvert (black ditch) travels under the road and through the village . This pipe is too small as it is and when it cant take anymore water it overflows and down the village via Water Lane , this inturn floods approx. 15 houses including mine .

So can you tell me how this development will not add to this flooding problem as the rain water from this development will run downwards only one way ?

I look forward to your reply

Yours sincerely Alex Fox
